Please read the operator’s manual carefully and make sure you understand the instructions before using the machine.

Lisez très attentivement et soyez certain de comprendre ces instructions avant d’utiliser cette machine.
HOW TO USE THIS MANUAL
This manual is designed to provide the customer with a means to identify the parts on his/her tractor when ordering repair parts. The illustrations may or may not represent the actual assemblies; therefore, it is not recommended to use this manual as a guide to assemble or disassemble the tractor. Some hardware and parts are drawn larger in order to more readily identify them.
Each tractor has its own model number.
The model number for your tractor can be found on the fender under the seat.
When ordering parts, always give the following information:
• Product - “TRACTOR”
• MODEL NUMBER - “YTH20V46” (96048005700)
• Part Number
• Part Description

COMMENT UTILISER CE MANUEL
Ce manuel a été dessiné pour fournir le client avec les moyens d’identification des pièces de détachées du tracteur quand il/elle a besoin de commander les pièces de rechange. Les illustrations ne peuvent pas représenter exactement le modèle que vous avez acheté. N’utilisez pas ce manuel comme un guide dans le montage et/ou démontage de votre tracteur. La visserie montrée est plus grande pour faciliter l’identification.
Chaque tracteur a un numéro de modèle particulier.
Le numéro de modèle du produit se trouvera sur l’aile, dessous le siège.
Lorsque vous commandez des pièces de rechange, donnez toujours les renseignements suivants:
• Produit - “TRACTEUR”
• NUMÉRO DU MODÈLE - “YTH20V46” (96048005700)”
• Numéro de la Pièce
• Description de la Pièce

### Engine Power Rating Information

The gross power rating for individual gas engine models is labeled in accordance with SAE (Society of Automotive Engineers) code J1940 (Small Engine Power & Torque Rating Procedure), and rating performance has been obtained and corrected in accordance with SAE J1995 (Revision 2002-05). Torque values are derived at 3060 RPM; horsepower values are derived at 3600 RPM. Actual gross engine power will be lower and is affected by, among other things, ambient operating conditions and engine-to-engine variability. Given both the wide array of products on which engines are placed and the variety of environmental issues applicable to operating the equipment, the gas engine will not develop the rated gross power when used in a given piece of power equipment (actual "on-site" or net power). This difference is due to a variety of factors including, but not limited to, accessories (air cleaner, exhaust, charging, cooling, carburetor, fuel pump, etc.), application limitations, ambient operating conditions (temperature, humidity, altitude), and engine-to-engine variability. Due to manufacturing and capacity limitations, Briggs & Stratton may substitute an engine of higher rated power for this Series engine.

Pour des pièces de service et de rechange de moteur, réclamez le numéro de téléphone libre pour votre fabricant de moteur énuméré ci-dessous:

Briggs & Stratton 1-800-233-3723

---

**Informations concernant la puissance théorique du moteur**

La puissance brute pour chaque Modèle de moteur à essence est indiquée conformément au code J1940 (procédure de calcul de la puissance et du couple des petits moteurs) de la SAE (Society of Automotive Engineers) et les performances théoriques ont été obtenues et corrigées selon SAE J1995 (révision 2002-05). Les valeurs de couple sont calculées sur la base de 3060 tr/min et celles de puissance sur la base de 3600 tr/min. La puissance brute réelle du moteur peut être plus faible notamment à cause des conditions de fonctionnement et des variations d’un moteur à l’autre. Compte tenu de la grande variété de machines sur lesquelles nos moteurs sont utilisés et du nombre de problèmes environnementaux applicables au fonctionnement des équipements, il se peut que le moteur à essence ne développe pas sa puissance théorique une fois qu’il est monté sur une machine particulière (puissance nette ou réelle « sur site »). Cette différence s’explique par un grand nombre de facteurs, tels que (liste non limitative): accessoires (filtre à air, échappement, admission, refroidissement, carburateur, pompe à essence, etc.), limites d’utilisation, conditions ambiantes d’utilisation (température, humidité, altitude) et variations d’un moteur à l’autre. Pour des raisons de fabrication et de capacité limitées, Briggs & Stratton est susceptible de remplacer ce Modèle par un moteur plus puissant.
