Please read the operator’s manual carefully and make sure you understand the instructions before using the machine.

INTRODUCTION

WARNING!
Failure to follow cautious operating practices can result in serious injury to the operator or other persons. The owner must understand these instructions, and must allow only trained persons who understand these instructions to operate the mower. Each person operating the mower must be of sound mind and body and must not be under the influence of any mind altering substance.

WARNING!
Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

WARNING!
Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Wash hands after handling.
Introduction

Congratulations
Thank you for purchasing a Husqvarna Pro Push Mower. This machine is built for high performance and rapid mowing.

This manual is a valuable document. Following the instructions (use, service, maintenance, etc.) can considerably increase the lifespan of your machine and even increase its resale value.

If you sell your machine, be sure to give the operator's manual to the new owner.

The final chapter of this operator's manual comprises a Service Journal. Ensure that service and repair work is documented. A well kept service journal reduces service costs for the season-based maintenance and affects the machine's resale value. Take the operator's manual along when the machine is delivered to the workshop for service.

General
In this operator's manual, left and right, backward and forward are used in relation to the machine's normal driving direction.

Continuous dedication to improve our products requires that specifications and design are subject to change without notice.

Driving and Transport on Public Roads
Check applicable road traffic regulations before transporting on public roads. If the machine is transported, you must always use approved fastening equipment and ensure that the machine is well anchored.

Towing
Do not tow this machine, it may cause damage to the drive system.

Operating
This machine is constructed only for mowing grass on lawns and other free and even ground without obstacles such as stones, tree stumps, etc. All other types of use are incorrect. The manufacturer's directions concerning operation, maintenance, and repairs must be carefully followed.

Lawnmowers and all power equipment can be potentially dangerous if used improperly. Safety requires good judgement, careful use in accordance with these instructions and common sense.

The machine must only be operated, maintained, and repaired by persons who are familiar with the machine's special characteristics and who are well versed in the safety instructions.

Accident prevention regulations, other general safety regulations, occupational safety rules, and traffic regulations must be followed without fail.

Unauthorized modifications to the design of the machine may absolve the manufacturer from liability for any resulting personal injury or property damage.
Good Service

Husqvarna’s products are sold all over the world and only in specialized retail stores with complete service. This ensures that you as a customer receive only the best support and service. Before the product is delivered, the machine has, for example, been inspected and adjusted by your retailer, see the certificate in the Service Journal in this operator’s manual.

When you need spare parts or support in service questions, warranty issues, etc., please consult the following professional:

<table>
<thead>
<tr>
<th>This Operator’s Manual belongs to the machine with manufacturing number:</th>
<th>Engine</th>
<th>Transmission</th>
</tr>
</thead>
</table>

Manufacturing Number

The machine’s manufacturing number can be found on the printed plate affixed to the chassis. Stated on the plate, from the top are:

- The machine’s type designation (I.D.).
- The manufacturer’s type number (Model).
- The machine’s serial number (Serial no.)

Please state the type designation and serial number when ordering spare parts.

The engine’s manufacturing number is stamped on one of the valve covers.

The plate states:

- The engine’s model.
- The engine’s type.
- Code

Please state these when ordering spare parts.
Symbols and Decals

These symbols are found on the machine and in the operator’s manual. Study them carefully so that you know what they mean.

**WARNING!**

Used in this publication to notify the reader of a risk of **personal injury**, particularly if the reader should neglect to follow instructions given in the manual.

**IMPORTANT INFORMATION**

Used in this publication to notify the reader of a risk of **material damage**, particularly if the reader should neglect to follow instructions given in the manual. Used also when there is a potential for misuse or misassembly.

- **Warning!**
- **CE conformity marking. Only for European market**
- **Power Take Off**
- **Fuel**
- **Noise emissions to the surroundings in accordance with the European Union’s directive. The machine’s emission is stated in the chapter TECHNICAL DATA and on the decals.**
- **Only machines for European market.**

- **Use protective glasses**
- **Use protective gloves**
SYMBOLS AND DECALS

1. READ OPERATING MANUAL AND FOLLOW SAFETY INSTRUCTIONS.
2. LOOK DOWN AND BEHIND BEFORE AND WHILE MOVING BACKWARDS.
3. MOW ACROSS SLOPES, NEVER UP OR DOWN SLOPES.
4. KEEP CHILDREN AND BYSTANDERS OUT OF AREA AND AWAY FROM MOWER.
5. CLEAN AREA OF DEBRIS AND LOOSE ITEMS BEFORE OPERATING MOWER.
6. KEEP ALL SAFETY DEVICES, SHIELDS, GUARDS AND DOORS IN PLACE AND WORKING.

Read Operator’s Manual. Shut off engine and remove spark plug wire before performing any maintenance or repair work. Whole body exposure to thrown objects. Severing of fingers and toes. Do not open or remove safety shields while engine is running. Keep a safe distance from the machine.

Moving sharp blades under cover can sever fingers.
SAFETY INSTRUCTIONS

Safety Instructions

These instructions are for your safety. Read them carefully. This cutting machine is capable of amputating hands and feet and throwing objects. Failure to observe the following safety instructions could result in serious injury or death.

**WARNING!**
This symbol means that important safety instructions need to be emphasized. It concerns your safety.

General Use

- Read all instructions in this operator’s manual and on the machine before starting it. Ensure that you understand them and then abide by them.
- Learn how to use the machine and its controls safely and learn how to stop quickly. Also learn to recognize the safety decals.
- Only allow the machine to be used by adults who are familiar with its use.
- Make sure nobody else is in the vicinity of the machine when you start the engine, engage the drive, or run the machine.
- Make sure animals and people maintain a safe distance from the machine.
- Stop the machine if someone enters the work area.
- Clear the area of objects such as stones, toys, steel wire, etc. that may become caught in the blades and thrown out.
- Beware of the discharge chute and do not point it at any one. Do not use the machine without the discharge chute in place.
- Stop the engine and prevent it from starting before you clean the discharge deck.
- Do not operate machine without the entire grass catcher, discharge guard, rear guard, or other safety protective devices in place and working.
- Remember that the operator is responsible for dangers or accidents.
- Shut down the blades when not mowing.
SAFETY INSTRUCTIONS

- Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
- Do not pull mower backwards unless absolutely necessary. Always look down and behind you before and while moving backwards.
- Slow down before turning.
- Never operate mower in wet grass. Always be sure of your footing and walk, never run.
- Be careful when mowing around fixed objects, so that the blades do not hit them. Never drive over foreign objects.
- Only use the machine in daylight or in other well-lit conditions. Keep the machine a safe distance from holes or other irregularities in the ground. Pay attention to other possible risks.
- Never use the machine if you are tired, if you have consumed alcohol, or if you are taking other drugs or medication that can affect your vision, judgment, or coordination.
- Beware of traffic when working near or crossing a road.

WARNING!
Engine exhaust and certain vehicle components contain or emit chemicals considered to cause cancer, birth defects, or other reproductive system damage. The engine exhaust contains carbon monoxide, which is a colorless, poisonous gas. Do not use the machine in enclosed spaces.

Keep children away from the work area

WARNING!
When using the machine, approved personal protective equipment should be used. Personal protective equipment cannot eliminate the risk of injury but it will reduce the degree of injury if an accident does happen. Ask your retailer for help in choosing the right equipment.

- Never leave the machine unsupervised with the engine running. Always stop the engine before leaving the machine.
- Never allow children or other persons not trained in the use of the machine to use or service it. Local laws may regulate the age of the user.
- Make sure that you have first aid equipment close at hand when using the machine.
- Never use the machine when barefoot. Always wear protective shoes or boots, preferably with steel toecaps.
- Always wear approved protective glasses or a full visor when assembling or mowing.

Personal protective equipment
SAFETY INSTRUCTIONS

- Always wear gloves when handling the blades.
- Never wear loose clothing that can get caught in moving parts.
- Use ear protectors to avoid damage to hearing.
- Stop the blade when crossing gravel drives, walks, or roads.
- Shut the engine off and wait until the blade comes to a complete stop before removing grass catcher.
- Disengage the self-propelled mechanism or drive clutch on mowers so equipped before starting the engine.
- If the equipment should start to vibrate abnormally, stop the engine and check immediately for the cause. Vibration is generally a warning of trouble.
- See manufacturer’s instructions for proper operation and installation of accessories. Use only accessories approved by the manufacturer.

Operating on Slopes

Operating on slopes is one of the operations where the risk is greatest that the operator will lose control or the machine will tip over, which can result in serious injury or death. All slopes require extra caution. If you feel unsure, do not mow the slope.

Do as follows

- Remove obstacles such as stones, tree branches, etc.
- Watch out for and avoid running over furrows, holes, and bumps. On uneven terrain, the machine can tip more easily. Long grass can hide obstacles.
- Mow across the face of slopes: never up and down. Exercise extreme caution when changing direction on slopes.
- Mow evenly and slowly.
- If the machine stops while going uphill, back down slowly.

Do not

- Do not make sudden changes in speed or direction.
SAFETY INSTRUCTIONS

- **Do not** drive the mower on terrain that slopes more than 10°.
- **Do not** mow near verges, ditches, or banks. The operator could lose footing or balance.
- **Do not** mow wet grass. Reduced footing could cause slipping.
- **Do not** turn on slopes unless necessary, and then, turn slowly and gradually downhill, if possible.
- **Avoid** starting or stopping on a slope. If the tires begin to slip, shut down the blades if so equipped or shut off the engine and move slowly down the slope.

### Children

- Serious accidents may occur if you fail to be on guard for children in the vicinity of the machine. Children are often attracted to the machine and mowing work. Never assume that children will stay where you last saw them.
- Keep children away from the mowing area and under close supervision by another adult.
- Keep an eye out and shut off the machine if children enter the work area.
- Before and during a reversing maneuver, look backward and downward for children.
- Never allow children to operate the machine.
- Be particularly cautious near corners, bushes, trees, or other objects that block your view.

### Maintenance

**WARNING!**
The engine must not be started when any protective plate for the mower deck’s drive belt is removed.

- Stop the engine.
- Never attempt to make wheel height adjustments while the engine is running.
- Only store fuel in containers approved for the purpose.
SAFETY INSTRUCTIONS

- Keep the nozzle in contact with the rim of the fuel tank or container opening at all times until fueling is complete. Do not use a nozzle lock-open device.
- Never fill containers inside a vehicle or on a truck or trailer bed with a plastic liner. Always place containers on the ground away from your vehicle before filling.
- Remove gas-powered equipment from the truck or trailer and refuel it on the ground. If this is not possible, then refuel such equipment with a portable container, rather than from a gasoline dispenser nozzle.
- Never fill the fuel tank indoors.
- Fuel and fuel fumes are poisonous and extremely flammable. Be especially cautious when handling fuel, as carelessness can result in personal injury or fire.
- Never remove the fuel tank cap and never fill the fuel tank while the engine is running.
- Allow the engine to cool before refueling. Do not smoke. Do not fill fuel in the vicinity of sparks or open flames.
- If leaks arise in the fuel system, the engine must not be started until the problem has been resolved.
- Store the machine and fuel in such a way that there is no risk of leaking fuel or fuel vapor leading to damages.
- Check the fuel level before each use and leave space for the fuel to expand, because the heat from the engine and the sun may otherwise cause the fuel to expand and overflow.
- Avoid overfilling. If you spill fuel on the machine, wipe up the spill and wait until it has evaporated before starting the engine. If you have spilled fuel on your clothing, change your clothing.
- Grass catcher components are subject to wear, damage, and deterioration, which could expose moving parts or allow objects to be thrown. Frequently check components and replace with manufacturer’s recommended parts, when necessary.

WARNING!
The engine and the exhaust system, become hot during operation. Risk for burns if touched.

Use protective glasses for maintenance work.
SAFETY INSTRUCTIONS

- Never make adjustments with the engine running.

- Ensure that nuts and bolts, especially the fastening bolts for the blade attachments, are properly tightened, torqued and that the equipment is in good condition.

- Do not modify safety equipment. Check regularly to be sure it works properly. The machine must not be used with defective or unmounted protective plates, protective cowlings, safety switches, or other protective devices.

- Do not change the settings of governors and avoid running the engine with overly high engine speeds. If you run the engine too fast, you risk damaging the machine components.

- Never use the mower indoors or in spaces lacking proper ventilation. The exhaust fumes contain carbon monoxide, an odorless, poisonous, and lethal gas.

- Stop and inspect the equipment if you run over or into anything. If necessary, make repairs before starting.

- The machine is tested and approved only with the equipment originally provided or recommended by the manufacturer.

- The blades are sharp and can cause cuts and gashes. Wrap the blades or use protective gloves when handling them.

- The mulch blades should only be used in familiar areas when higher quality mowing is desired.

- Reduce the risk of fire by removing grass, leaves, and other debris that may have accumulated on the machine. Allow the machine to cool before putting it in storage.

Transport

- The machine is heavy and can cause serious crushing injuries. Be extra cautious when it is loaded on or unloaded from a vehicle or trailer.

- Use an approved trailer to transport the mower. Fasten the machine with approved fastening devices, such as straps, chains, or ropes, when transporting.
SAFETY INSTRUCTIONS

- Check and abide by local traffic regulations before transporting.
- Do not tow this machine, it may cause damage to the drive system.

Customer responsibilities

- Read and observe the safety rules.
- Follow a regular schedule in maintaining, caring for and using your mower.
- Follow the instructions under “Maintenance” and “Storage” sections of this owner’s manual.

WARNING!

This mower is equipped with an internal combustion engine and should not be used on or near any unimproved forest-covered, bush-covered or grass-covered land unless the engine’s exhaust system is equipped with a spark arrester meeting applicable local or state laws (if any). If a spark arrester is used, it should be maintained in effective working order by the operator.

A spark arrester for the muffler is available through your authorized Husqvarna dealer.
**Controls**

This operator’s manual describes the Husqvarna Pro Push Mower. The mower is fitted with a Kawasaki engine.

**Control Locations**

CONTROLS

Engine Speed

The engine speed was set at the factory for optimum performance. Speed is not adjustable.

Operator Presence Control (OPC)

Models: W21SBK, W53SBEK, W21SBKC

Your lawn mower is equipped with an operator presence control (OPC). The engine will start whether the OPC is engaged or not. The blade will not operate unless the OPC is engaged. If blade is engaged, releasing the OPC will stop the blade but will not stop the engine.

Your lawn mower is equipped with an operator presence control (OPC). The engine will not start unless the OPC is pulled rearward. The engine and blade will stop turning when the OPC is released.

CAUTION:
Federal regulations require an engine control to be installed on this lawn mower in order to minimize the risk of blade contact injury. DO NOT under any circumstances attempt to defeat the function of the operator control. The blade turns when the engine is running.

Fuel Shut Off Valve

The fuel shut off valve is located under the fuel tank. The valve has two positions; ON and OFF.

Refueling

The machine has one fuel tank. The tank volume is 2.1quarts or 0.53 gallon (2.0 liters).

The engine will run on a minimum of 85-octane unleaded gasoline (no oil mix). Environmentally adapted alkylate gasoline can be used beneficially. See also Technical Data concerning ethanol fuel. Methanol fuel is not recommended.
When operating in temperatures below 32° F. (0° C.), use fresh, clean winter grade gasoline to help insure good cold weather starting.

**Choke Control (All Models)**

The choke control is used for cold starts in order to provide the engine with a richer fuel mixture.

For cold starts the throttle lever should be pushed all the way forward past “FAST” position to “CHOKE” position. Once engine has warmed pull throttle lever rearward to “FAST” (run) position.

**Throttle Control (All Models)**

The throttle control regulates the engine speed and thereby the rate of rotation of the blades. In order to increase or decrease the engine speed, the control is moved forward or backward respectively.

Avoid idling the engine for long periods, as there is a risk of fouling the spark plugs.

**USE FULL THROTTLE WHEN MOWING,** for best mower performance.
**Blade Brake Control (BBC)**

Models: W21SBK, W53SBEK, W21SBKC

The Blade Brake Control (BBC) engages the blade drive. The Operator Presence Control (OPC) must be engaged and the engine running to engage the BBC.

Illustration shows ground speed bail engaged to operate in transport mode. Release ground speed bail to prevent movement.

To engage BBC, press the control forward as shown in illustration.

To stop blade from turning release OPC as shown in illustration.

Illustration shows ground speed bail in engaged position.
CONTROLS

Cutting height

The cutting deck height is obtained by raising the wheels for low cut and lowering wheels for high cut, adjust cutting height to suit your requirements. Medium position is best for most lawns.

To change your cutting height, squeeze adjuster lever toward wheel. Move wheel up or down to suit your requirements. Be sure all wheels are in the same setting.

NOTE: Adjuster is properly positioned when plate tab inserts into hole in lever. Also, 9-position adjusters (if so equipped) allow lever to be positioned between the plate tabs.

Ground Drive Bail

The ground drive bail for models so equipped, is used to engage the drive wheels.

The ground drive bail is engaged by pressing the bail forward to engage the drive wheels. Release the ground drive bail to stop rear wheels from driving.

Ground drive bail, Models: W21SBK, W53SBEK, W21SBKC

Ground drive bail, Models: W21SK, W53SEK, W21SKC

No ground drive bail, Model: W21K, W21KC
Shut Off Engine

Models: W21SBK, W53SBEK, W21SBKC
To stop engine, release OPC bail to stop blades. Pull back on throttle control to stop engine.

Models: W21SK, W53SEK, W21SKC
Pull throttle control back to slow speed. Release OPC bail to stop engine.

Model: W21K, W21KC
Pull throttle control back to slow speed. Release OPC bail to stop engine.
Mulching Kits are available separately, containing blade and mulch plug.

To Convert Mower

Your lawn mower was shipped as a rear discharge mower. To convert to bagging or side discharge:

REAR BAGGING

- Lift rear door of the lawn mower and place the grass catcher frame hooks onto the door pivot pins.
- To convert to mulching or discharging operation, remove grass catcher and close rear door.

SIDE DISCHARGING

- Discharge flap must be closed.
- Open discharge flap and install discharge deflector under discharge flap.
- Mower is now ready for discharging operation.
- To convert to mulching or bagging operation, discharge deflector **MUST** be removed and discharge flap **MUST** be closed.

SIMPLE STEPS TO REMEMBER WHEN CONVERTING YOUR LAWN MOWER

FOR REAR DISCHARGING-
1. Discharge flap closed.

FOR REAR BAGGING-
1. Grass catcher installed.
2. Discharge flap closed.

FOR SIDE DISCHARGE-
1. Rear door closed.
2. Discharge deflector installed.

To Empty Grass Catcher

- Lift up on grass catcher using frame handle.
- Remove grass catcher with clippings from under lawn mower handle.
- Empty clippings from bag using both frame handle and bag handle.

**NOTE:** Do not drag the bag when emptying; it will cause unnecessary wear.

**CAUTION:**
DO NOT run your lawn mower without discharge flap closed or approved grass catcher in place. NEVER attempt to operate the lawn mower with the discharge flap removed or propped open.
OPERATION

Before Starting Engine

ADD OIL

Your lawn mower is shipped without oil in the engine. For type and grade of oil to use see “ENGINE” in the Maintenance section of this manual or the engine manual.

1. Be sure lawnmower is level.
2. Remove oil dipstick from oil fill spout.
3. Engine holds 0.90 qt (0.85L) of oil. For type and grade of oil to use, see “ENGINE” in the Maintenance section of this manual or the engine manual that comes with the unit.
4. Pour oil slowly. DO NOT overfill. Wait one minute to allow oil to settle. Insert dipstick without tightening, then remove it to check oil level.

ADD GASOLINE

• Fill fuel tank to bottom of tank filler neck. DO NOT overfill. Use fresh, clean, regular unleaded gasoline with a minimum of 87 octane. DO NOT mix oil with gasoline. Purchase fuel in quantities that can be used within 30 days to assure fuel freshness.

WARNING!

Wipe off any spilled oil or fuel. DO NOT store, spill or use gasoline near an open flame. Alcohol blended fuels (called gasohol or using ethanol or methanol) can attract moisture which leads to separation and formation of acids during storage. To avoid engine problems, the fuel system should be emptied before storage of 30 days or longer. Empty the gas tank, start the engine and let it run until the fuel lines and carburetor are empty. Use fresh fuel next season. See Storage Instructions for additional information.

CAUTION:

DO NOT overfill engine with oil, or it will smoke on startup.

IMPORTANT INFORMATION

Check oil level before each use. Add oil if needed. Fill to full line on dipstick. Change the oil after every 25 hours of operation or each season. You may need to change the oil more often under dusty, dirty conditions. See “TO CHANGE ENGINE OIL” in the Maintenance section of this manual.

WARNING!

Wipe off any spilled oil or fuel. DO NOT store, spill or use gasoline near an open flame.

CAUTION:

NEVER use engine or carburetor cleaner products in the fuel tank or permanent damage may occur.
OPERATION

TO START ENGINE

NOTE: Due to protective coatings on the engine, a small amount of smoke may be present during the initial use of the product and should be considered normal.

To start a cold engine, push the throttle control lever to the choke position.

Models: W21SBK & W53SEK, W21SBKC
Pull starter cord briskly. It is not necessary to engage OPC control. Do not engage ground speed control bail. When engine starts, move the throttle control to fast position. Do not allow the starter cord to snap back.

Models: W21SK, W53SEK, W21SKC
Hold Operator Presence Control in engaged position. Do not engage the Ground Speed Control Bail. Pull the starter cord briskly. When the engine starts, move the throttle control to fast position. Do not allow the starter cord to snap back.

Model: W21K, W21KC
Hold Operator Presence Control in engaged position. Pull the starter cord briskly. When the engine starts move the throttle control to fast position. Do not allow the starter cord to snap back.

NOTE: In cooler weather it may be necessary to choke engine. In warmer weather, it may not be necessary to choke the engine. Too much choke may cause engine flooding and prevent the engine from starting. If the engine becomes flooded, wait a few minutes before attempting to start.
OPERATION

Transmission Selector

BBC Self propelled Models Only
Models: W21SBK, W53SBEK, W21SBKC

Mowing

Prepare the area before mowing. Look for obstacles, remove foreign objects and clear the work area of pets and bystanders. Check the equipment for fuel, oil, loose fasteners etc. Make sure the equipment is in top shape. Correct any defects before using the mower.

Select the appropriate speed with the transmission lever.

- Position 1 on the transmission selector is the slowest speed.
- Position 2 is for moderate speed.
- Position 3 is the fastest ground speed setting.

Set transmission lever to the speed required.

Set choke control to “ON” position.

Start engine by pulling briskly on starter rope.
Set throttle control to high speed.

Engage Operator Presence Control (OPC).

Engage Blade Brake Control (BBC).

Engage Ground Speed Bail to begin mowing.

TIP: To extend clutch life do not engage BBC and start blade while in tall grass. Start the blade in short cut grass or over a hard level surface. Allow the blade to come up to speed (1-2 seconds) before mowing grass.
When finished mowing, release OPC bail to stop blade rotation.

Release Ground Speed Bail to stop wheel rotation.

Pull throttle control all the way rearward to stop engine.
Self Propelled Models Only
Models: W21SK, W53SEK, W21SKC

Mowing
Prepare the area before mowing. Look for obstacles, remove foreign objects and clear the work area of pets and bystanders. Check the equipment for fuel, oil, loose fasteners etc. Make sure the equipment is in top shape. Correct any defects before using the mower.

Engage Operator Presence Control (OPC).

Start engine by pulling briskly on starter rope.

Set throttle control to high speed.

When finished mowing release OPC bail to stop blade rotation and stop engine.
Mowing Tips

Under certain conditions, such as very tall grass, it may be necessary to raise the height of cut to reduce pushing effort and to keep from overloading the engine and leaving clumps of grass clippings. It may also be necessary to reduce ground speed and/or run the lawn mower over the area a second time.

- For extremely heavy cutting, reduce the width of cut by overlapping previously cut path and mow slowly.
- For better grass bagging and most cutting conditions, the engine speed should be set in the fast position.
- Pores in cloth grass catchers can become filled with dirt and dust with use and catchers will collect less grass. To prevent this, regularly hose catcher off with water and let dry before using.
- Keep top of engine around starter clear and clean of grass clippings and chaff. This will help engine air flow and extend engine life.

WARNING!
DO NOT use de-thatcher blade attachments on your mower. Such attachments are hazardous, will damage your mower and could void your warranty.
Mulching Mowing Tips

- The special mulching blade will recut the grass clippings many times and reduce them in size so that as they fall onto the lawn they will disperse into the grass and not be noticed. Also, the mulched grass will biodegrade quickly to provide nutrients for the lawn. ALWAYS mulch with your highest engine (blade) speed as this will provide the best recutting action of the blades.

- Avoid cutting your lawn when it is wet. Wet grass tends to form clumps and interferes with the mulching action. The best time to mow your lawn is the early afternoon. At this time the grass has dried, yet the newly cut area will not be exposed to direct sunlight.

- For best results, adjust the lawn mower cutting height so that the lawn mower cuts off only the top one-third of the grass blades. If the lawn is overgrown it will be necessary to raise the height of cut to reduce pushing effort and to keep from overloading the engine and leaving clumps of mulched grass. For extremely heavy mulching, reduce your width of cut by overlapping previously cut path and mow slowly.

- Certain types of grass and grass conditions may require that an area be mulched a second time to completely hide the clippings. When doing a second cut, mow across (perpendicular) to the first cut path.

- Change your cutting pattern from week to week. Mow north-south one week, then change to east-west the next week. This helps prevent matting/graining of lawn.

**IMPORTANT INFORMATION**

For best performance, keep mower housing free of built-up grass and trash. See “Cleaning” in Maintenance section of this manual.
MAINTENANCE

Maintenance

Maintenance Schedule
The following is a list of maintenance procedures that must be performed on the machine. For those points not described in this manual, visit an authorized service workshop. An annual service carried out by an authorized service workshop is recommended to maintain your machine in the best possible condition and to ensure safe operation.

Read Safety Instructions section "Maintenance".

* If so equipped.
** Power-Propelled mowers.
***Use a scraper to clean under deck.
1-Change more often if operating under a heavy load or at high ambient temperatures.
2-Service more often if operating in dirty or dusty conditions.
3-Replace blades more often when mowing in sandy soil.
4-And after each 5 hours of use.

WARNING!
No adjustments or maintenance to be carried out unless:
- The engine is stopped.
- Spark plug wire is removed.
General Recommendations

The warranty on this lawn mower does not cover items that have been subjected to operator abuse or negligence. To receive full value from the warranty, operator must maintain mower as instructed in this manual.

Some adjustments will need to be made periodically to properly maintain your unit.

At least once a season, check to see if you should make any of the adjustments described in this Maintenance section.

- At least once a year, replace the spark plug, clean or replace air filter element and check blade for wear. A new spark plug and clean/new air filter element assure proper air-fuel mixture and help your engine run better and last longer.
- Follow the maintenance schedule in this manual.

Before Each Use

1. Check engine oil level.
2. Check for loose fasteners.

Ignition System

The engine is equipped with an electronic ignition system. Only the spark plugs require maintenance.

For recommended spark plugs, see Technical Data.

1. Remove the ignition cable boot and clean around the spark plug.
2. Remove the spark plug with a spark plug socket wrench.
3. Check the spark plug. Replace the spark plug if fouled, the electrodes are burned and if the insulation is cracked or damaged. Clean the spark plug with a steel brush if it is to be reused.
4. Measure the electrode gap with a gapping tool. The gap should be .030" (0.75 mm). Adjust as necessary by bending the side electrode.
5. Reinsert the spark plug, turning by hand to avoid damaging the threads.
6. After the spark plug is seated, tighten it

---

IMPORTANT INFORMATION

Fitting the wrong spark plug type can damage the engine.

Inadequately tightened spark plugs can cause overheating and damage the engine. Tightening the spark plugs too hard can damage the threads in the cylinder head.
using a spark plug wrench so that the washer is compressed. A used spark plug should be turned 1/8 of a turn from the seated position. A new spark plug should be turned 1/4 a turn from the seated position.

Replace the ignition cable.

Checking the Engine's Cooling Air Intake

Check that the engine's cooling air intake is free from leaves, grass, and dirt. If the cooling air intake is clogged, engine cooling deteriorates, which can lead to engine damage.

Check and clean the cooling air intake
MAINTENANCE

Checking and Adjusting the Throttle Cable and Choke Cable

Check that the engine responds to throttle increases and that a good engine speed is attained at full throttle.

If doubts arise, contact the service workshop. If adjustments are necessary, they can be made as follows:

1. Position the throttle/choke control lever to full throttle (not the “Choke”) position.

2. Loosen cable clamp and slide cable rearward to the internal stop on the carburetor linkage (until strong resistance is felt).

3. Hold cable in this position while tightening cable clamp securely. Verify choke operation using the throttle/choke control lever.

4. Move throttle choke control lever to make sure the choke is disengaged and the engine runs at full speed when the throttle control is moved to the “Fast” position.

5. Verify the control slows the engine when the throttle/choke lever is pulled rearward and the engine stops (BBC models only).

6. Start the engine and move the throttle lever to the fast (or high) position. Using a tachometer, check the engine speed.

7. The carburetor and engine rpm is not field adjustable. If out of specification, take it to an authorized Kawasaki engine dealer. Do not overspeed engine or defeat the engine governor.
Replacing Air Filter

If the engine seems weak or runs unevenly, the air filter may be clogged. If run with a dirty air filter, the spark plugs can become fouled, disturbing operation.

For this reason, it is important to replace the air filter regularly (see the heading Maintenance Schedule for the proper service interval).

To clean/replace the air filter:

**WARNING!**
Allow the exhaust system to cool before performing service. Risk for burns.

**IMPORTANT INFORMATION**
Operating the engine without an air filter, or with a damaged air filter, will allow dirt to enter the engine, causing rapid engine wear. This type of damage is not covered by the Distributor’s Limited Warranty.

**Inspection**

Push up latches on the sides of the air cleaner case. Remove the air cleaner cover and inspect the filter elements. Clean or replace dirty filter elements. Always replace damaged filter elements.

1. Remove the paper and foam elements.
2. Inspect both air filter elements and replace them if they are damaged. Always replace the paper filter element at the scheduled interval (200 hours).
3. To clean the foam element wash in detergent and warm water, and let the element air-dry thoroughly before installing it.
4. To clean the paper element, tap it gently on a flat surface to remove dust.
5. Clean the housing with detergent and water and dry thoroughly.

**IMPORTANT INFORMATION**
Do not use compressed air to clean the paper element. Do not oil the paper or foam elements.
MAINTENANCE

Replacing the Fuel Filter

Replace the line-mounted fuel filter every 100 hours (once per season) or more regularly if it is clogged.

Replace the filter as follows:

1. Move the hose clamps away from the filter. Use flat-nosed pliers.
2. Pull the filter loose from the hose ends.
3. Push the new filter into the hose ends. Position the filter with the “FLOW” arrow pointing up toward the fuel pump. If necessary, a soap solution can be applied to the filter ends to ease mounting.
4. Move the hose clamps back toward the filter.

Checking Tires

- Keep tires free of gasoline, oil, or insect control chemicals which can harm rubber.
- Avoid stumps, stones, deep ruts, sharp objects and other hazards that may cause tire damage.

Drive Wheels

Check rear drive wheels each time before you mow to be sure they move freely.

The wheels not turning freely means trash, grass cuttings, etc. are in the drive wheel area and must be cleaned to free drive wheels.

If necessary to clean the rear drive wheels, be sure to clean both front wheels.

1. Remove hubcaps, locknuts and washer.
2. Remove wheels from wheel adjusters.
3. Remove any trash or grass cuttings from inside the dust cover, pinion and/or drive wheel gear teeth.
4. Put wheels back in place

**NOTE:** If after cleaning, the drive wheels do not turn freely, contact a qualified service
MAINTENANCE

Checking the V-belts

Check every 100 hours of operation. Check for severe cracking and large nicks.

NOTE: The belt will show some small cracks in normal operation.

The belts are not adjustable. Replace belts if they begin to slip from wear.

Checking the Blade

In order to attain the best mowing effect, it is important that the blade is well sharpened and not damaged.

A bent or cracked blade or blade with large nicks should be replaced.

Check the blade mounts.

IMPORTANT INFORMATION

The sharpening of the blade should be carried out by an authorized service workshop.

A damaged blade should be replaced when hitting obstacles that result in a breakdown. Let the service workshop decide whether the blade can be repaired/ground or must be replaced.

Always use protective gloves when handling the blade.

Check the blade
MAINTENANCE

Blade replacement:

- Remove blade bolt by turning counterclockwise.

**WARNING!**
The blade is sharp. Protect your hands with gloves and/or wrap the blade with a heavy cloth when handling.

**IMPORTANT INFORMATION**
To ensure proper assembly, center hole in blade must align with star on cutter housing.

- Install new or resharpened blade with stamped “GRASS SIDE” facing towards ground/grass (down) or “THIS SIDE UP” facing deck and cutter housing.
- Install and tighten blade bolt securely.
  Torque blade bolt to 45-55 ft/lbs (60-75 Nm).

**IMPORTANT INFORMATION**
Special blade bolt is heat treated.
Replace with Husqvarna bolt if required.
Do not use lower grade hardware than specified.

Gear Case

- To keep our drive system working properly, the gear case and area around the drive should be kept clean and free of trash build-up. Clean under the drive cover twice a season.
- The gear case is filled with lubricant to the proper level at the factory. The only time the lubricant needs attention is if the service has been performed on the gear case.
MAINTENANCE

Grass Catcher

- The grass catcher may be hosed with water, but must be dry when used.
- Check your grass catcher often for damage or deterioration. Through normal use it will wear. If catcher needs replacing, replace only with approved replacement catcher shown in the Repair Parts section of this manual. Give the mower model number when ordering.

Muffler

Inspect and replace corroded muffler as it could create a fire hazard and/or damage.

Cleaning

IMPORTANT: FOR BEST PERFORMANCE, KEEP MOWER HOUSING FREE OF BUILT-UP GRASS AND TRASH. CLEAN THE UNDERSIDE OF YOUR MOWER AFTER EACH USE.

- Clean the underside of your lawn mower by scraping to remove build-up of grass and trash.
- Clean engine often to keep trash from accumulating. A clogged engine runs hotter and shortens engine life.
- Keep finished surfaces/wheels free of gasoline, oil, etc.
- We do not recommend using a garden hose to clean lawn mower unless the electrical system, muffler, air filter and carburetor are covered to keep water out. Water in engine can result in shortened engine life.

Clean Under Drive Cover

Clean under drive cover at least twice a season. Scrape underside of cover with putty knife or similar tool to remove any build-up of trash or grass on underside of drive cover.
MAINTENANCE

Adjusting the Lawn Mower

WARNING!
Before performing any service or adjustment:
1. Release control bar and stop engine.
2. Make sure the blade and all moving parts have completely stopped.
3. Disconnect spark plug wire from spark plug and place where it cannot come in contact with plug

Adjusting Cutting Height
See “TO ADJUST CUTTING HEIGHT” In the Operation section of this manual.

Rear Deflector
The rear deflector, attached between the rear wheels of your mower, is provided to minimize the possibility that objects will be thrown out of the rear of the mower into the operator’s mowing position. If the deflector becomes damaged, it should be replaced.

To Remove Drive Belt
1. Remove drive cover. Remove belt from gearcase pulley by pushing down on pulley and rolling belt off it.
2. Turn mower on its side (air filter and carburetor up).
3. Remove blade.
4. Remove shaft support.
5. Remove belt from engine pulley on crankshaft.
Replace drive belt by reversing above steps.

NOTE: Always use factory approved belt to assure fit and long life.

To Adjust Handle
The handle can be mounted in a high or low position. The mounting holes in the bottom of handle are off center for raising or lowering the handle.
1. Remove handle and all wire tie(s) securing cable(s) to handle.
2. Remove bolts and nuts from handle bracket mounting.
3. Squeeze lower handle in to remove from mounting brackets.
4. Move handle to mounting holes in bracket to raise or lower handle.
5. Replace bolts and nuts, tighten securely. Re-attach cables to handle with wire ties.
MAINTENANCE

Engine Adjustment

Engine Speed
Your engine speed has been factory set. Do not attempt to increase engine speed or it may result in personal injury. If you believe that the engine is running too fast or too slow, take your lawn mower to an authorized service center for repair and adjustment.

Carburetor
Your carburetor is not adjustable. If your engine does not operate properly due to suspected carburetor problems, take your lawn mower to an authorized service center for repair and/or adjustment.

IMPORTANT: NEVER TAMPER WITH THE ENGINE GOVERNOR, WHICH IS FACTORY SET FOR PROPER ENGINE SPEED. OVERSPEEDING THE ENGINE ABOVE THE FACTORY HIGH SPEED SETTING CAN BE DANGEROUS. IF YOU THINK THE ENGINE-GOVERNED HIGH SPEED NEEDS ADJUSTING, CONTACT YOUR NEAREST AUTHORIZED SERVICE CENTER, WHICH HAS PROPER EQUIPMENT AND EXPERIENCE TO MAKE ANY NECESSARY ADJUSTMENTS.

Cleaning and Washing
Regular cleaning and washing, especially under the mower deck, will increase the machine’s lifespan. Make it a habit to clean the machine directly after use (after it is cooled), before the dirt sticks.

Do not spray water on the top of the mower deck. Use compressed air to clean the top side of mower deck.

Use protective glasses when cleaning and washing.

Hardware
Check daily. Inspect the entire machine for loose or missing hardware.
Lubrication

Keep unit well lubricated (See “LUBRICATION CHART”).

IMPORTANT: DO NOT OIL OR GREASE PLASTIC WHEEL BEARINGS. VISCOUS LUBRICANTS WILL ATTRACT DUST AND DIRT THAT WILL SHORTEN THE LIFE OF THE SELF-LUBRICATING BEARINGS. IF YOU FEEL THEY MUST BE LUBRICATED, USE ONLY A DRY, POWDERED GRAPHITE TYPE LUBRICANT SPARINGLY.

Mower Lubrication Chart

IMPORTANT INFORMATION
Use minimal lubrication and remove excess lubricant so that it does not come into contact with belts or belt pulley drive surfaces.

Engine Lubrication

Use only high quality detergent oil rated with API service classification SG-SL. Select the oil’s SAE viscosity grade according to your expected operating temperature.

NOTE: Multi-viscosity oils (5W30, 10W30, etc.) improve starting in cold weather, and you should check your engine oil level frequently to avoid possible engine damage from running low on oil.
LUBRICATION

Change the oil after every 25 hours of operation or at least once a year if the lawn mower is not used for 25 hours in one year.

Check the crankcase oil level before starting the engine and after each five (5) hours of continuous use. Tighten oil plug securely each time you check the oil level.

To Change Engine Oil

**NOTE:** Before tipping lawn mower to drain oil, empty fuel tank by running engine until tank is empty.

1. Disconnect spark plug wire from spark plug and place wire where it cannot come in contact with plug.
2. Remove engine oil cap; lay aside on clean surface.
3. Tip lawn mower on its side as shown and drain oil into a suitable container. Rock lawn mower back and forth to remove any oil trapped inside of engine.
4. Wipe off any spilled oil from mower or side of engine.
5. Replace engine oil cap.
6. Slowly pour oil down the oil fill spout, stopping every few ounces to check the oil level with the dipstick.
7. Stop adding oil when you reach the FULL mark on the dipstick. Wait a minute to allow oil to settle.
8. Continue adding small amounts of oil, rechecking the dipstick until oil level settles at FULL. DO NOT overfill, or engine will smoke heavily from the muffler on startup.
9. Always be sure to retighten oil dipstick before starting engine.
10. Reconnect spark plug wire to spark plug.

**WARNING!**

Engine oil can be very hot if it is drained directly after stopping the engine. Allow the engine to cool first.
6. Changing the Oil Filter

1. Drain the engine oil in accordance with the work description under the heading Engine Oil/Change Engine Oil.

2. Remove the oil filter. If necessary, use a filter remover.

3. Wipe new, clean engine oil onto the seal for the new filter.

4. Mount the filter by hand with + 3/4 turn.

5. Run the engine warm, then check that there are no leaks around the oil filter seal.

6. Check the oil level in the engine, fill if necessary. The oil filter holds 0.2 qt (0.2 liters) of oil.
