Gasoline containing up to 10% ethanol (E10) is acceptable for use in this machine. The use of any gasoline exceeding 10% ethanol (E10) will void the product warranty.

Operator Manual
MZ6128 / 966613103

Please read the operator’s manual carefully and make sure you understand the instructions before using the machine.
To implement improvements, specifications and designs can be altered without prior notification. Note that no legal demands can be placed based on the information contained in these instructions. Use only original parts for repairs. The use of other parts voids the warranty. Do not modify or install non-standard equipment to the unit without consent from the manufacturer. Modifications to the unit may cause unsafe operations or damage the unit.

When this product is worn out and no longer used, it should be returned to the reseller or other party for recycling.

WARNING!
Failure to follow cautious operating practices can result in serious injury to the operator or other persons. The owner must understand these instructions, and must allow only trained persons who understand these instructions to operate the mower.
Each person operating the mower must be of sound mind and body and must not be under the influence of any mind altering substance.

WARNING!
Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

WARNING!
Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Wash hands after handling.
INTRODUCTION

Congratulations
Thank you for purchasing a Husqvarna ride-on mower. This machine is built for superior efficiency to rapidly mow primarily large areas. A control panel that is easily accessible to the operator and a hydrostatic transmission regulated by steering controls both contribute to the machine’s performance.
This manual is a valuable document. Read the contents carefully before using or servicing the machine. The following of instructions (use, service, maintenance) by all who operate this machine is important for the safety of the operator and others. It can also considerably increase the life span of the machine and increase its resale value.
If you sell your machine, be sure to give the operator’s manual to the new owner.
The final chapter of this operator’s manual provides a Service Journal. Ensure that service and repair work are documented. A well-kept service journal reduces service costs for the maintenance and affects the machine’s resale value. Please contact your dealer for more information. Take the operator’s manual along when the machine is taken to your dealer for service.

General
In this operator’s manual, left and right, backward and forward are used in relation to the machine’s normal driving direction.
Continuous dedication to improve our products require that specifications and design are subject to change without notice.

Driving and Transport on Public Roads
Check applicable road traffic regulations before transporting on public roads. If the machine is transported, you must always use approved fastening equipment and ensure that the machine is well anchored. DO NOT operate this machine on public roadways.

Towing
If machine is equipped with a tow hitch, use extreme caution when towing. Never allow children or others in or on the towed equipment. Make wide turns to avoid jack-knifing. Travel slowly and allow extra distance to stop.
Do not tow on sloped ground. The weight of the towed equipment may cause loss of traction and loss of control.
Follow the manufacturer’s recommendation for weight limits for towed equipment. Do not tow near ditches, canals, and other hazards.

Operating
This machine is constructed only for mowing grass on lawns and even ground without obstacles such as stones, tree stumps, etc. The machine can also be used for other tasks when equipped with special accessories provided by the manufacturer. Operating instructions for the accessories are provided with delivery. All other types of uses are incorrect. The manufacturer’s directions concerning operation, maintenance, and repairs must be carefully followed.
Lawn mowers and all power equipment can be potentially dangerous if used improperly. Safety requires good judgment, careful use in accordance with these instructions and common sense.
The machine must only be operated, maintained, and repaired by persons familiar with the machine’s special characteristics and who are also knowledgeable about the safety instructions. Use only approved repair parts to maintain this machine.
Accident prevention regulations, other general safety regulations, occupational safety rules, and traffic regulations must be followed without fail.
Unauthorized modifications to the design of the machine may absolve the manufacturer from liability for any resulting personal injury or property damage.
**INTRODUCTION**

**Good Service**
Husqvarna's products are sold only in specialized retail stores with complete service. This ensures that you as a customer receive only the best support and service. Before the product is delivered, the machine has, for example, been inspected and adjusted by your retailer. See the certificate in the Service Journal in this operator’s manual.

When you need spare parts or support in service questions, warranty issues, etc., please consult the following professional:

| This Operator Manual belongs to the machine with the manufacturing number: | Engine |

**Manufacturing Number**

*The machine’s manufacturing number can be found on the printed plate affixed to the engine compartment.*

Stated on the plate, from the top are:

- The machine’s type designation (I.D.).
- The manufacturer’s type number (Model).
- The machine’s serial number (Serial no.)

*Please have the type designation and serial number available when ordering spare parts.*

The engine’s manufacturing number is stamped on one of the valve covers.

The plate states:

- The engine’s model.
- The engine’s type.
- Code

*Please have these available when ordering spare parts.*

The wheel motors and hydrostatic pumps have a barcode decal affixed at the rear.
SYMBOLES AND DECALS

These symbols are found on the machine and in the operator’s manual. Study them carefully so that you know what they mean.

**WARNING!**

Xxxx xxxxxx xxxxx xxxx xxxxxxxxxxx x xxxxxxxxxx. xx xxxxxxxx xxxx xxxxxxx.

Used in this publication to notify the reader of a risk of **personal injury or death**, particularly if the reader should neglect to follow instructions given in the manual.

**IMPORTANT INFORMATION**

Xxxx xxxxxx xxxxx xxxx xxxxxxxxxxx x xxxxxxxxxx. xx xxxxxxxx xxxx xxxxxxxx.

Used in this publication to notify the reader of a risk of **material damage**, particularly if the reader should neglect to follow instructions given in the manual. Used also when there is a potential for misuse or misassembly.

- **R** Reverse
- **N** Neutral
- **Fast**
- **Slow**
- **Choke**
- **Fuel**
- **Warning!**
- **Parking Brake**
- **CE conformity marking. Only for European market**
- **Do not stand here**
- **Use protective glasses**
- **Use protective gloves**
SYMBOLS AND DECALS

Read Operator’s Manual

Shut off engine and remove key before performing any maintenance or repair work

Keep a safe distance from the machine

Use on slopes no greater than 10°

No passengers

Whole body exposure to thrown objects

Severing of fingers and toes

Do not open or remove safety shields while engine is running

Careful backing up, watch for other people

Careful going forward, watch for other people

Moving sharp blades under cover

Battery acid is corrosive, explosive and flammable

Warning! Rotating blades, keep away from the discharge deck

Do not touch parts
Safety Instructions
These instructions are for your safety. Read them carefully.

**WARNING!**
THIS CUTTING MACHINE IS CAPABLE OF AMPUTATING HANDS AND FEET AND THROWING OBJECTS. FAILURE TO OBSERVE THE FOLLOWING SAFETY INSTRUCTIONS COULD RESULT IN SERIOUS INJURY OR DEATH.

General Operation
- Read, understand, and follow all instructions on the machine and in the manual before starting.
- It is recommended that someone be aware that you are mowing and can provide help in case of injury or accident.
- Do not put hands or feet near rotating parts or under the machine. Keep clear of the discharge opening at all times.
- Only allow responsible adults, who are familiar with the instructions, to operate the machine.
- Clear the area of objects such as rocks, toys, wire, etc., which could be picked up and thrown by the blades.
- Be sure the area is clear of bystanders before operating. Stop machine if anyone enters the area.
- Never carry passengers. The machine is only intended for use by one person.
- Do not mow in reverse unless absolutely necessary. Always look down and behind before and while backing.
- Never direct discharged material toward anyone. Avoid discharging material against a wall or obstruction. Material may ricochet back toward the operator. Stop the blades when crossing gravel surfaces.
- Do not operate machine without the entire grass catcher, discharge guard, or other safety devices in place and working
- Slow down before turning.
- Never leave a running machine unattended. Always turn off blades, set parking brake, stop engine, and remove keys before dismounting.

**WARNING!**
This symbol means that important safety instructions need to be emphasized. It concerns your safety.

---

Read the operator’s manual before starting the machine

Clear the area of objects before mowing
SAFETY

• Disengage blades when not mowing. Shut off engine and wait for all parts to come to a complete stop before cleaning the machine, removing the grass catcher, or unclogging the discharge guard.
• Operate machine only in daylight or good artificial light.
• Do not operate the machine while under the influence of alcohol or drugs.
• Watch for traffic when operating near or crossing roadways.
• Use extra care when loading or unloading the machine into a trailer or truck.
• Always wear eye protection when operating machine.
• Wear proper Personal Protective Equipment (PPE) while operating this machine, including (at a minimum) sturdy footwear, eye protection, and hearing protection. Do not mow in shorts and/or footwear with open toes.
• Data indicates that operators age 60 years and above are involved in a large percentage of riding mower-related injuries. These operators should evaluate their ability to operate the riding mower safely enough to protect themselves and others from serious injury.
• Follow the manufacturer’s recommendation for wheel weights or counterweights.
• Anyone who operates this machine must first read and understand this Operation Manual. Local laws may regulate the age of the user.
• Keep machine free of grass, leaves or other debris buildup which can touch the hot exhaust or engine parts and burn. Do not allow the mower deck to plow leaves or other debris, causing buildup to occur.
• Clean any oil or fuel spillage before operating or storing the machine.
• Allow machine to cool before storage.

WARNING!

Engine exhaust and certain vehicle components contain or emit chemicals considered to cause cancer, birth defects, or other reproductive system damage. The engine exhaust contains carbon monoxide, which is an odorless, colorless, poisonous gas. Do not use the machine in enclosed spaces.
Personal Safety Equipment

WARNING!
When using the machine, approved personal protective equipment (shown in illustrations) shall be used. Personal protective equipment cannot eliminate the risk of injury but it will reduce the degree of injury if an accident does happen. Ask your retailer for help in choosing the right equipment.

- Make sure that you have first aid equipment close at hand when using the machine.
- Never use the machine when barefoot.
- Always wear protective shoes or boots, preferably with steel toe caps.
- Always wear approved protective glasses or a full visor when assembling or driving.
- Always wear gloves when handling the blades.
- Never wear loose clothing that can get caught in moving parts.
- Use ear protectors to avoid damage to hearing.

Slope Operation
Slopes are a major factor related to loss of control and tip-over accidents, which can result in severe injury or death. Operation on all slopes requires extra caution. If you cannot back up the slope or if you feel uneasy on it, do not mow it.

- Mow up and down slopes (10 degrees maximum), not across.
- Watch for holes, ruts, bumps, rocks, or other hidden objects. Uneven terrain could overturn the machine. Tall grass can hide obstacles.
- Choose a low ground speed so that you will not have to stop while on the slope.
- Do not mow on wet grass. Tires may lose traction.
- Avoid starting, stopping, or turning on a slope. If the tires lose traction, disengage the blades and proceed slowly straight down the slope.
- Keep movement on the slopes slow and gradual. Do not make sudden changes in speed or direction, which could cause machine to roll over.
- Use extra care while operating machine with grass catchers or other attachments; they can affect the stability of the machine.
- Do not use on steep slopes.

WARNING!
Do not drive up or down hills with slopes greater than 10 degrees. Do not drive across any slopes.
SAFETY

- Do not try to stabilize the machine by putting a foot on the ground.
- Do not mow near drop-offs, ditches, or embankments. The machine could suddenly roll over if a wheel is over the edge or if the edge caves in.

![Be extra cautious when driving on slopes](image1)

**WARNING!**

CHILDREN CAN BE INJURED BY THIS EQUIPMENT. The American Academy of Pediatrics recommends that children be a minimum of 16 years of age before operating a riding lawn mower.

*Children*

Tragic accidents can occur if the operator is not alert to the presence of children. Children are often attracted to the machine and the mowing activity. 

*Never* assume that children will remain out of the path of danger.

- Keep children out of the mowing area and in the watchful care of a responsible adult other than the operator.
- Be alert and turn machine off if a child enters the area.
- Before and while backing, look behind and down for small children.
- Never carry children, even with the blades shut off. They may fall off and be seriously injured or interfere with safe machine operation. Children who have been given rides in the past may suddenly appear in the mowing area for another ride and be run over or backed over by the machine.
- Never allow children to operate the machine.
- Use extra care when approaching blind corners, shrubs, trees, or other objects that may block the view of a child.

![Keep children away from work area](image2)

![Never allow children to operate the machine](image3)
Safe Handling of Gasoline

**WARNING!**
The engine must not be started when the driver’s floor plate or any protective plate for the mower deck’s drive belt is removed.

To avoid personal injury or property damage, use extreme care in handling gasoline. Gasoline is extremely flammable and the vapors are explosive.

- Extinguish all cigarettes, cigars, pipes, and other sources of ignition.
- Use only approved gasoline container.
- Never remove gas cap or add fuel with the engine running. Allow engine to cool before refueling.
- Never fuel the machine indoors.
- Never store the machine or fuel container where there is an open flame, spark, or pilot light such as on a water heater or other appliance.
- Before beginning to refuel, minimize the risk of static electricity by touching a metal surface.
- Never fill containers inside a vehicle or on a truck or trailer bed with plastic liner. Always place containers on the ground away from the vehicle when filling.
- Remove gas-powered equipment from the truck or trailer and refuel it on the ground. If this is not possible, refuel such equipment with a portable container, rather than from a gasoline dispenser nozzle.
- Keep the nozzle in contact with the rim of the fuel tank or container opening at all times until fueling is complete. Do not use a nozzle lock-open device.
- If fuel is spilled on clothing, change clothing immediately.
- Never overfill fuel tank. Replace gas cap and tighten securely.
- Do not start the engine near spilled fuel.
- Never use gasoline as a cleaning agent.
- If leaks arise in fuel system, engine must not be started until problem has been resolved.
- Check the fuel level before each use and leave space for the fuel to expand, as the heat from the engine and the sun may otherwise cause the fuel to expand and overflow.

**WARNING!**
The engine and the exhaust system become very hot during operation.
There is risk for burns if touched.
Allow engine and exhaust system to cool before refueling.
SAFETY

General Maintenance

- Never drive the machine in an enclosed space.
- Keep all nuts and bolts tight to be sure the equipment is in safe working condition.
- Never tamper with safety devices. Check their proper operation regularly.
- Keep machine free of grass, leaves, or other debris buildup. Clean oil or fuel spillage and remove any fuel-soaked debris. Allow machine to cool before storing.
- If the machine strikes a foreign object, stop and inspect the machine. Repair, if necessary, before restarting.
- Never make any adjustments or repairs with the engine running.
- Check grass catcher components and the discharge guard frequently and replace with manufacturer’s recommended parts, when necessary.
- Mower blades are sharp. Wrap the blade or wear gloves, and use extra caution when servicing them.
- Check brake operation frequently. Adjust and service as required.
- Maintain or replace safety and instruction labels, as necessary.
- Do not modify safety equipment. Check regularly to be sure it works properly. The machine must not be driven with defective or unmounted protective plates, protective cowlings, safety switches, or other protective devices.
- Do not change the settings of governors and avoid running the engine with overly high engine speeds. If the engine runs too fast, there is risk for damaging the machine components.
- Be very careful when handling battery acid. Acid on skin can cause serious corrosive burns. If battery acid is spilled on skin, rinse immediately with water.
- Acid in the eyes can cause blindness, contact a doctor immediately.
- Be careful when servicing the battery. Explosive gases form in the battery. Never perform maintenance on the battery when smoking or near open flames or sparks.
- The battery can explode and cause serious injury or damage.
- Make sure that the equipment is in good condition and that all nuts and bolts, especially those fastening the blade attachments, are properly tightened and torqued.
Sparking can occur when working with the battery and the heavy cables of the starter circuit. This can cause battery explosion, fire or eye injury. Sparking in this circuit can not occur after the chassis cable (normally negative, black) is removed from the battery.

**WARNING!**

Avoid electrical sparking and its consequences by the following routines:

- Use protective goggles.
- Ensure that the fuel filler cap is mounted tightly and no flammable substances are stored in an open vessel.
- Never work with the starter circuit if there is spilled fuel.
- Disconnect the negative cable from the battery first and reconnect it last.
- Do not make a bridge short circuit across the starter relay to run the starter.

- Never use the machine indoors or in spaces lacking proper ventilation. The exhaust fumes contain carbon monoxide, an odorless, poisonous, and lethal gas.
- Stop to inspect the equipment if the machine runs over or into anything. If necessary, make repairs before starting.
- Never make adjustments with the engine running.
- The machine is tested and approved only with the equipment originally provided or recommended by the manufacturer. Only use approved repair parts for the machine.
- The blades are sharp and can cause cuts and gashes. Wrap the blades or use protective gloves when handling them.
- Check the parking brake’s functionality regularly. Adjust and service as necessary.
- The mulch blades should only be used in familiar areas when higher quality mowing is desired.
- Reduce the risk of fire by removing grass, leaves, and other debris that may have accumulated on the machine.
- Allow the machine to cool before putting it in storage.
- Regularly clean deck and underside of deck, avoid spraying engine and electrical components with water.
SAFETY

Transport
- The machine is heavy and can cause serious crushing injuries. Be extra cautious when it is loaded on or unloaded from a vehicle or trailer.
- Use an approved trailer to transport the machine. Activate the parking brake, turn off the fuel supply, and fasten the machine with approved fastening devices, such as bands, chains, or straps, when transporting.
- Do not operate this machine on public roadways.
- Check and abide by local traffic regulations before transporting the machine on any road.
- Do not tow this machine: it may cause damage to the drive system.
- Load the unit onto truck or trailer by driving up ramps of suitable strength using a slow speed. Do not lift! The machine is not intended to be lifted by hand.
- When loading or unloading this machine, do not exceed the maximum recommended operation angle of 10°.

WARNING!
Use extreme caution when loading the machine into a truck or trailer using ramps. There is the possibility of serious injury or death if the machine falls off the ramps.

IMPORTANT INFORMATION
The parking brake is not sufficient to lock the machine in place during transport. Ensure that the machine is well fastened to the transport vehicle. Always reverse the machine onto the transport vehicle to avoid tipping it over.

Towin
If machine is equipped with a tow hitch, use extreme caution when towing. Never allow children or others in or on towed equipment.
Make wide turns to avoid jack-knifing. Travel slowly and allow extra distance to stop. Do not tow on sloped ground. The weight of the towed equipment may cause loss of traction and loss of control.
Follow the manufacturer’s recommendation for weight limits for towed equipment. Do not tow near ditches, canals, and other hazards.

Spark Arrestor
This mower is equipped with an internal combustion engine and should not be used on or near any unimproved forested, bush covered or grassy lands unless the engine’s system is equipped with a spark arrestor meeting applicable local or state laws (if any).
In the state of California the above is required by law (Section 4442 of the California Public Resources Code).
Other states may have similar laws. Federal laws apply on federal lands.
A spark arrestor for the muffler is available through any authorized Husqvarna dealer.

WARNING!
Escaping hydraulic oil under pressure can have sufficient force to penetrate the skin, causing serious injury. If injured by escaping fluid, see a doctor at once. Serious infection or reaction can develop if proper medical treatment is not administered immediately.
This operator's manual describes the Husqvarna Zero Turn Rider. The rider is fitted with a Briggs & Stratton four-stroke overhead valve engine. Transmission from the engine is made via belt-driven hydraulic pumps. Using the left and right steering controls, the flow is regulated and thereby the direction and speed.

Control Locations

1. Motion control levers
2. Parking brake
3. Tracking knob
4. Fuel tank
5. Hydro release levers
6. Choke control
   Ignition switch
7. Hour meter
8. Throttle control
9. Blade switch
10. Seat adjustment lever
11. Right tracking bolt
12. Cutting height adjuster
13. Deck lift pedal
**Motion Control Levers**

The machine’s speed and direction are continuously variable using the two steering controls. The steering controls can be moved forward or backward about a neutral position. Furthermore, there is a neutral position, which is locked if the steering controls are moved outward.

When both controls are in the neutral position (N), the machine stands still.

By moving both controls an equal amount forward or backward, the machine moves in a straight line forward or backward respectively.

For example, to turn right while moving forward, move the right control towards the neutral position. The rotation of the right wheel is reduced and the machine turns to the right.

Zero turn can be achieved by moving one control backward (behind the neutral position) and carefully moving the other steering control forward from its neutral position. The rotation direction when zero turning is determined by which steering control is moved backward behind the neutral position. If the left steering control is pulled backward, the machine turns to the left. Use extra care when using this maneuver.

---

**WARNING!**

The machine can turn very rapidly if one steering control is moved much further forward than the other.
Hour Meter
The hour meter displays the total operating time with the blade activated.
The display on the hour meter will turn on the oil can icon after every fifty hours of use and will stay on for two hours or until the meter is manually reset. To manually reset the timer, turn the ignition key to the run position and then engage and disengage the blade switch five times at one second intervals.

Choke Control
The choke control is used for cold starts in order to provide the engine with a richer fuel mixture. For cold starts the control should be pulled out to its extent.

Tracking Knob
If the mower is not tracking straight, check the air pressure in both rear tires. Recommended air pressure is 10 psi (.7 bar) for the front tires and 15 psi (1 bar) for the rear tires. Tracking must be checked on a flat and level concrete or blacktop surface. Rotating the tracking knob allows fine tuning adjustments so the machine tracks straight with the steering control levers in the full forward position. Rotate the knob clockwise (as viewed from the operation position) to increase the speed on the left lever. Rotate counterclockwise to decrease speed.
CONTROLS

Parking Brake
The parking brake is found on the left of the machine. Pull the lever backward to activate the brake and push forward to release it.

IMPORTANT INFORMATION
The machine must stand absolutely still when applying the parking brake. Always set the parking brake before dismounting. Release the parking brake before moving the mower.

Blade Switch
To engage the mower deck, pull the blade switch knob out. The mower blades are disengaged when the knob is pressed down fully.

Ignition Switch
The ignition switch is placed on the control panel and is used to start and stop the engine. Turn the key clockwise to start the engine.
Release the key to the RUN position when the engine has started.

On models equipped with headlights, turn the key clockwise to ACCESSORY for headlight use.

**Fuses**

Fuses are located on the left hand side of the machine. They are accessed by tilting the seat forward. Fuses are flat pin fuses type as used in automobiles. There are two fuses with ratings and functions:

- 20 A, Primary fuse
- 7.5 A, Mower deck coupling
**CONTROLS**

**Cutting Height Adjuster**
The desired cutting height is set with the height pin. The cutting height pedal releases the deck lift to place the deck and the selected height. For transport, push the lift pedal fully forward until the deck lift latches in the transport (highest) position.

1. Release pedal
2. Height pin

**Fuel Shut Off Valve**
The fuel shut off valve is centered behind the rear of the seat. The valve is off when the handle tab is turned **perpendicular** to the fuel line.

**Seat Adjustment Lever**
The seat can be adjusted lengthways. When making adjustments, the lever under the front edge of the seat is moved to the left (as seen by the driver in the seat), after which the seat can be moved backward or forward.
Fuel Tank
Read the safety instructions before refueling. The capacity for the tank is 5 gallons (19 liters).
Regularly check the gas cap gasket for damage and keep the cap properly tightened.
The engine will run on a minimum of 87-octane unleaded gasoline (no oil mix). Environmentally adapted alkylate gasoline can be used. See Technical Data concerning ethanol fuel. Methanol fuel is not allowed. Do not use E85 alcohol based fuel. Damage to the engine and components may occur.
When operating in temperatures below 32° F. (0° C.), use fresh, clean winter grade gasoline to help insure good cold weather starting.

**WARNING!**
Gasoline is highly flammable. Observe caution and fill the tank outdoors (see the safety instruction).

**WARNING!**
The engine and the exhaust system become very hot during operation. Risk for burns if touched. Allow engine and exhaust system to cool before refueling.

**WARNING!**
Fill to bottom of filler neck. Do not overfill. Wipe off any spilled oil or fuel. Do not store, spill or use gasoline near an open flame.

Hydro Release Levers
Transaxle bypass linkages must be engaged when pushing or pulling the mower. The release levers are located on each side of the rear of the unit below the rear engine plate. See Manual Transport in the Operation section.

**WARNING!**
Bypass linkages are located close to the muffler. To prevent burns, the engine should be shut off and allowed to cool before the bypass linkage levels are handled.
Read the Safety Instructions section and the following pages if you are unfamiliar with the machine.

Training
Due to unique steering capabilities, zero turn mowers are far more maneuverable than typical riding mowers.

This section should be reviewed in its entirety prior to attempting to move the mower under its own power. When first operating the mower or until becoming comfortable with controls, use a reduced throttle speed and reduced ground speed. DO NOT move control levers to the furthest forward or reverse positions during initial operation.

First time users should become familiar with the mower’s movement on a hard surface, such as concrete or blacktop PRIOR to attempting to operate on turf. Until the operator becomes comfortable with the mower controls and zero turning capability, overly aggressive maneuvers may damage turf.

Steering

To move forward and backward
The direction and speed of the mower’s movements are effected by the movement of the control lever(s) on each side of mower. The left control lever controls the left wheel. The right control lever controls the right wheel.

First time users should push the mower (see Moving Machine By Hand in the Operation section) to an open, flat area without other people, vehicles or obstacles nearby. To move the unit under its own power, the operator must sit in the seat and start the engine (see Before Starting in the Operation section). Adjust the engine speed to idle, disengage the parking brake but do not engage the blades at this time. Rotate control levers inward. As long as the control levers have not been moved forward or backwards, the mower will not move.

Slowly move both control levers forward slightly. This will allow mower to start moving forward in a straight line. Pull the control levers back to the neutral position and the mower should stop moving.

Pull back slightly on control levers, allowing the mower to move backwards. Push the control levers forward to the neutral position and mower should stop moving.

To turn to the right
While moving in a forward direction, pull the right lever back towards the neutral position while maintaining the position of the left lever, this will slow the rotation of the right wheel and cause the machine to turn in that direction.

To turn to the left
While moving in a forward direction pull the left lever back towards the neutral position while maintaining the position of the right lever, this will slow the rotation of the left wheel and cause the machine to turn in that direction.

To zero turn
While moving in a forward direction, first pull both control levers back until the mower stops or slows dramatically.

Then by alternating one lever slightly to the forward position and the other in the reverse position, complete the turn.
BeforeStarting
1. Read the sections on Safety and Controls before starting the machine.
2. Perform the daily maintenance before starting (see Maintenance Schedule in the Maintenance section).
3. Check that there is sufficient fuel in the fuel tank.
4. Adjust the seat to the desired position.

5. Set the deck cutting height by inserting the lift pin into the desired cut height.

The following conditions must be fulfilled before the engine can be started:
• The blade switch must be pressed downward into the disengaged position.
• The parking brake must be up into the activated position.
• Both steering controls must be in the locked (outer) neutral position.
OPERATION

Starting the Engine
1. Sit on the seat.
2. Raise the mower deck to the transport position by locking the lift pedal fully forward.

3. Activate the parking brake.

4. Disengage the mower blades by depressing the blade switch.
5. Move the steering controls outward to the locked (outer) neutral position.

6. Move the throttle to the middle position. If the engine is cold, the choke control should be pulled up.

7. Open the fuel tank valve.
8. Press in and turn the ignition key to the start position.

**IMPORTANT INFORMATION**

Do not run the starter for more than 5 seconds each time. If the engine does not start, wait about 10 seconds before retrying.

9. When the engine starts, immediately release the ignition key back to the run position.

10. Slowly push in the choke control knob, if it was used to start a cold engine.

**WARNING!**

Engine exhaust and certain vehicle components contain or emit chemicals considered to cause cancer, birth defects or other reproductive system damage. The engine exhaust contains carbon monoxide, which is an odorless, colorless, poisonous gas. Do not use the machine in enclosed spaces.

11. Set the engine speed with the throttle. Allow the engine to run at a moderate speed, approximately mid throttle, for 3-5 minutes before loading it too heavily. **USE FULL THROTTLE WHEN MOWING** (no choke).
WARNING!
Lead-acid batteries generate explosive gases. Keep sparks, flame and smoking materials away from batteries. Always wear eye protection when around batteries.

IMPORTANT INFORMATION
The mower is equipped with a 12-volt negative grounded system. The other vehicle must also be a 12-volt negative grounded system. Do not use the mower to start other vehicles.

Jumper Cables Use
1. Connect each end of the RED cable to the POSITIVE (+) terminal on each battery, taking care not to short against chassis.
2. Connect one end of the BLACK cable to the NEGATIVE (-) terminal of the fully charged battery.
3. Connect the other end of the BLACK cable to a good CHASSIS GROUND on the mower with the discharged battery, away from the fuel tank and battery.

To remove cables, reverse order
4. Remove BLACK cable first from chassis and then from the fully charged battery.
5. Remove RED cable last from both batteries.
Running

1. Release the parking brake by moving the lever downward.
   NOTE: The mower is equipped with an operator presence system. When the engine is running, any attempt by the operator to leave the seat without first setting the parking brake will shut off the engine.
2. Move the steering controls inwards, out of the neutral position (N).

**WARNING!**

Make sure that no one is near mower when engaging blade switch.
Make sure the work area is free from objects that could be thrown by the rotating blades.

4. Move throttle control to full throttle (rabbit symbol).
5. Engage the mower deck by pulling out the blade switch.
Operating on Hills
Read the Safety Instructions Driving on Slopes in the Safety Instructions.

**WARNING!**
Do not drive up or down hills with slopes greater than 10 degrees. Do not drive across slopes.

**IMPORTANT INFORMATION**
Control levers return to neutral when released. This may cause the mower to suddenly stop.

1. Use the slowest speed possible before starting up or down hills.
2. Avoid stopping or changing speed on hills.
3. If stopping is absolutely necessary, pull drive levers into the neutral position and push to the outside of the unit and engage the parking brake.

4. To restart movement, release the parking brake.
5. Pull the control levers back to the center of the mower and press forward to regain forward motion.
6. Make all turns slowly.

Place controls in neutral position

Release the parking brake to restart movement
STOPPING THE ENGINE

1. Move the throttle to the minimum position (tortoise symbol).
2. Move the steering controls outward.
3. Disengage the mower deck by depressing the blade switch.
4. Raise the mower deck by pressing the foot pedal forward to the transport position.
5. When the machine is standing still, activate the parking brake by pulling the lever upward. If the engine has been worked hard, allow it to idle at least 60 seconds to attain a normal operating temperature before stopping. To prevent fouling the spark plugs, avoid idling the engine for longer periods.
6. Turn the ignition key to the stop position.
7. Remove key. Always remove key when leaving the mower to prevent unauthorized use.
Mowing Tips

- Observe and flag rocks and other fixed objects to avoid collisions.
- Begin with a high cutting height and reduce it until the desired mowing result is attained. The average lawn should be cut to 2½" (64 mm) during the cool season and over 3" (76 mm) during the hot months. For healthier and better looking lawns, mow often after moderate growth.
- For best cutting performance, grass over 6" (15 cm) in height should be mowed twice. Make the first cut relatively high; the second to the desired height.
- The mowing result will be best with a high engine speed (the blades rotate rapidly) and low speed (the rider moves slowly). If the grass is not too long and dense, the driving speed can be increased without negatively affecting the mowing result.
- The finest lawns are obtained by mowing often. The lawn becomes more even and the grass clippings more evenly distributed over the mown area. The total time taken is not increased as a higher operating speed can be used without poor mowing results.
- Avoid mowing wet lawns. The mowing result is poorer because the wheels sink into the soft lawn, clumps build, and the grass clippings fasten under the cowling.
- Hose the mower deck underside with water after each use. When cleaning, the mower deck shall be raised into the transport position. Make sure the mower is cooled and the engine is off.
- Use compressed air to clean top surface of the deck. Avoid flooding water on top surface, engine and electrical components.
- When the mulching kit is used, it is important that the mowing interval is frequent and that the deck is cleaned more often.

**WARNING!**
Clear the lawn of stones and other objects that can be thrown out by the blades.

**WARNING!**
Never drive the rider on terrain that slopes more than 10 degrees. Mow slopes up and down, never side to side. Avoid sudden directional changes.

Mowing pattern
Moving Machine By Hand

**WARNING!**
No adjustments or maintenance should be carried out unless:

- the engine stopped
- the ignition key removed
- the parking brake activated

When pushing or pulling the mower, engage the IZT (Integrated Zeroturn Transaxle) bypass linkages. The release levers are located on each side of the rear of the unit below the rear engine plate.

1. Raise the deck to the highest (transport) position.
2. Pull the release levers up and out of the keyhole slots. Release the levers with the head outside the bracket and held into the bypass setting.
3. To reengage the IZTs to drive, reverse the above procedure.

Load the machine into truck or trailer by driving up ramps in low gear. **DO NOT LIFT!** The machine is not intended to be lifted by hand.

**WARNING!**
Use extreme caution when loading the machine into a truck or trailer using ramps. There is the possibility of serious injury or death if the machine falls off the ramps.

**WARNING!**
Bypass linkages are located close to the muffler. To prevent burns, the engine should be shut off and allowed to cool before the bypass linkage levers are handled.
# Maintenance Schedule

The following is a list of maintenance procedures that must be performed on the machine. For those points not described in this manual, visit an authorized service workshop. An annual service carried out by an authorized service workshop is recommended to maintain your machine in the best possible condition and to ensure safe operation. Read Maintenance in the Safety section.

---

**WARNING!**

Before performing any service or adjustment checklist:

- Engage the parking brake.
- Place the Blade-switch in the disengaged position.
- Turn the ignition switch to OFF position and remove the key.
- Make sure the blades and all moving parts have completely stopped.
- Disconnect the spark plug wire from all spark plugs and place the wire where it cannot come in contact with the plug.
Battery
Your mower is equipped with a maintenance free battery and does not need servicing. However, periodic charging of the battery with an automotive type battery charger will extend its life.
- Keep battery and terminals clean.
- Keep battery bolts tight.
- See chart for charging times.

Cleaning battery and terminals
Corrosion and dirt on the battery and terminals can cause the battery to lose power.
1. Open the terminal access doors.
2. Disconnect BLACK battery cable first, then the RED battery cable and remove the battery from the machine.
3. Rinse the battery with plain water and dry.
4. Clean terminals and battery cable ends with wire brush until shiny.
5. Coat terminals with grease or petroleum jelly.
6. Reinstall battery.

Replacing battery
1. Lift seat and rotate forward.
2. Open terminal access doors
3. Using two ½" wrenches disconnect BLACK battery cable then RED battery cable.
4. Using a ¾ wrench, remove the bolts on either side of the terminal guard and lift off guard.
5. Carefully remove the battery from the mower.
6. Install new battery with terminals in the same position as the old battery.
7. Reinstall battery terminal guard.
8. Connect RED battery cable to positive (+) battery terminal with hex bolt and hex nut.
9. Connect BLACK grounding cable to negative (-) battery terminal with remaining hex bolt and hex nut.
10. Close access doors.
11. Lower seat.

Standard Battery

<td>50%</td>
<td>85 min. 150 min. 195 min. 370 min.</td>
</tr>
</tbody>
</table>

*Charging time depends on battery capacity, condition, age, temperature and efficiency of charger.

**CAUTION!**
Wear eye protection around batteries.

**IMPORTANT INFORMATION**
Do not attempt to open or remove caps or covers. Adding or checking level of electrolyte is not necessary.
Always use two wrenches for the terminal screws.

**WARNING!**
Do not short battery terminals by allowing a wrench or any other object to contact both terminals at the same time.
Before connecting battery, remove metal bracelets, wristwatch bands, rings, etc.
Positive terminal must be connected first to prevent sparks from accidental grounding.
Safety System
This machine is equipped with a safety system that prevents starting or driving under the following conditions.
The engine can only be started when:
• The mower deck is disengaged.
• The steering controls are in the outer, locked neutral position.
• The parking brake is on.
Make daily inspections to ensure that the safety system works by attempting to start the engine when one of the conditions is not met. Change the conditions and try again.
If the machine starts when one of these conditions is not met, turn the machine off and repair the safety system before using the machine again.
Make sure the engine stops when the park brake is not engaged and the operator leaves the seated position.
Check that the engine stops if the mower blades are engaged and the driver temporarily moves off the driver’s seat.

Tire Pressures
Fill tire pressures to 15 psi / 103 kPa / 1 bar.

Parking Brake
Visually check that no damage is found on the lever, links, or switch belonging to the parking brake. Perform a standstill test and check that there is sufficient braking action.

**WARNING!**
Faulty adjustment results in reduced braking ability and can cause an accident.

**IMPORTANT INFORMATION**
The machine must be standing still when applying the parking brake.
Deck Belt

Deck Belt Removal
Park on a level surface. Apply park brake. Lower the deck into the lowest cutting position.
1. Remove foot plate and belt shields.
2. Using a ratchet or breaker bar with a \( \frac{9}{16} \)" socket on the spring idler bolt, relieve the tension on the belt.
3. Remove any dirt or grass that may have accumulated around the cutter housings and entire deck surface.
4. Carefully roll the belt over the top of the cutter housing pulleys.
5. Remove the belt from around the electric clutch on the engine shaft and off the mower deck.

Deck Belt Installation

NOTE: For ease in installing the deck belt, refer to the routing decal on the deck.
1. Wrap the deck belt around the electric clutch pulley that is located on the engine shaft.
2. Route the belt forward between the spring loaded and stationary pulleys.
3. Place belt around spring loaded idler pulley.
4. Wrap the belt around the stationary idler pulley and around the mandrel housings.
5. Push inward on the idler arm and carefully route belt over stationary idler pulley. Once belt is properly routed, slowly release idler arm to tension belt.
6. Check that there are not twists in the belt and that the routing matches the routing decal.
7. Replace belt shields on both mandrel housings and secure with fasteners.
**Pump Belt**
The belts are not adjustable. Replace belts if they begin to slip from wear.

**Replacing Pump Belt**
Park the mower on a level surface. Engage the parking brake.

**Belt Removal**
From the top side of the deck:
1. Remove the deck belt (see *Deck Belt Removal* in this section of the manual).
2. Tilt seat forward to access fan covers. Remove both fan covers.

From the underside of the mower:
3. Remove clutch stop to access the belt.
4. With a ½" breaker bar and using the square opening in the pump idler arm, shift the arm to create slack in the belt.
5. With the idler arm in the slack position, slip a screwdriver, clevis pin or similar into the 3/8" hole in the plate that sits between the two fan covers. This will keep the idler in the extended position and allow removal of the breaker bar.
6. Remove belt from the engine and pump pulleys over the top of the fans.

**Belt Installation**
1. If the pump is not locked in the extended position, repeat Steps 4 and 5 from the above instructions.
2. Slip the belt over the fans and route it between the idler pulleys.
3. Place the belt over the right and left idler pulleys.
4. Place the belt on the engine pulley.
5. Use the breaker bar to hold the tension off the belt while removing the implement used as a brace in the plate.
6. Replace and secure clutch stop.
7. Reinstall the fan shields.
8. Reinstall the deck belt. (See *Deck Belt Installation* in this section of the manual).

**V-belts**
Check every 100 hours of operation. Check for severe cracking and large nicks.

NOTE: The belt will show some small cracks in normal operation.
Cutting Blades
To attain the best mowing effect, it is important that blades are well sharpened and not damaged.
Replace blades that have been bent or cracked when hitting obstacles.
Let the service workshop decide whether a blade with large nicks can be repaired/ground or must be replaced. Balance the blades after sharpening.
Check the blade mounts.

Blade Replacement

1. Remove blade bolt by turning counterclockwise.
2. Install new or re-sharpened blade with stamped GRASS SIDE facing towards ground/grass (down) or THIS SIDE UP facing deck and cutter housing.
3. Install and tighten blade bolt securely.
4. Torque blade bolt to 45-55 ft-lbs (60-75 Nm).

IMPORTANT INFORMATION
Special blade bolt is heat treated.
Replace with a Husqvarna bolt if required.
Do not use lower grade hardware than specified.

WARNING!
Before performing any service or adjustment checklist:
1. Engage the parking brake.
2. Place the Blade switch in the disengaged position.
3. Turn ignition switch to OFF position and remove the key.
4. Make sure the blades and all moving parts have completely stopped.
5. Disconnect the spark plug wire from all spark plugs and place the wire where it cannot come in contact with the plug.
Adjusting the Mower Deck

Check the tire pressure before adjustment of the mower deck. See **Tire Pressures** in **Maintenance** section. Faulty mower deck adjustments will cause an uneven mowing result.

**Leveling deck**

Adjust the deck while the mower is on a level surface. Make sure the tires are inflated to the correct pressure. See **Technical Data / Transmission**. If tires are under or over inflated, you cannot properly adjust your deck.

Four slots control the height and pitch of the mower deck. The deck should be adjusted slightly higher in the rear.

NOTE: To insure accuracy of leveling procedure, mower deck drive belt must be installed prior to leveling deck.

1. Wear heavy gloves. Turn each outer blade tip to align with the deck side-to-side.

2. Measure from the floor surface up to the bottom of the blade tip on the discharge side of the mower deck. Retain this measurement. Move to the opposite side, check that measurement is the same. If adjustment is required, loosen the locknut and move mounting bolt up or down in slot until both side-to-side measurements are equal. Retain measurement.

3. Turn both outer blades to align with the deck in front-to-rear manner. Reposition rear mounting bolts up or down until rear of mower deck is positioned level to \( \frac{1}{8} \)" higher in the rear than the side-to-side measurement.

4. Confirm measurements once again. Blade tips should be level in a side-to-side manner. In the rear, blade tips should be level to \( \frac{3}{8} \)" higher than side-to-side measurement. In the front, blade tips should be level to \( \frac{1}{8} \)" lower than side-to-side measurement.

NOTE: This will place the mower deck in a standard measurement position. Depending on the type of grass being mowed or environmental conditions, additional adjustments may be required to achieve the desired cut.
Anti-scalp rollers
Anti-scalp rollers are properly adjusted when they are just slightly off of the ground when the deck is at the desired cutting height in the operating position. Anti-scalp rollers then keep the deck in the proper position to help prevent scalping in most terrain conditions.

IMPORTANT INFORMATION
Adjust anti-scalp rollers with the mower on a flat level surface.

Anti-scalp rollers can be set in three positions:
• Upper position 1½ to 3" (38 to 76 mm) grass.
• Middle position 3" to 4½" (76 to 114 mm) grass.
• Lower position 4½" to 6" (114 to 152 mm) grass.
The rollers should be approximately ¼" (6.5 mm) from ground. Do not adjust the rollers to support the deck.

IMPORTANT INFORMATION
To avoid deck damage, the anti-scalp rollers must not be adjusted to support the deck.
MAINTENANCE

Caster Wheels
Check every 200 hours. Check that wheels rotate freely.

IMPORTANT INFORMATION
DO NOT add any type of tire liner or foam fill material to the tires. Excessive loads created by foam tires will cause premature failures.
Use only O.E.M. specified tires.

Removal and Installation
Remove nut and caster bolt. Pull the wheel out of the fork.
To reinstall, reverse the order. Tighten caster bolt.
If wheels do not rotate freely, take the unit to the dealer for service.

Hardware
Check daily. Inspect the entire machine for loose or missing hardware.

Cleaning
Regular cleaning and washing, especially under the mower deck, will increase the machine’s life-span.
Make it a habit to clean the machine directly after use (after it is cooled), before the dirt sticks.
Do not spray water on the top of the mower deck. Use compressed air to clean the top side of mower deck.
Regularly clean deck and underside of the deck with normal water pressure. Do not use a high pressure washer or steam cleaner. Avoid spraying engine and electrical components with water.
Do not rinse hot surfaces with cold water. Let unit cool before washing.

Use protective glasses when cleaning and washing.

- 12/12 Every year
- 1/52 Every Week
- 1/365 Every day

Lubricate with grease gun
Oil change
Level check
Filter change

* Change hydraulic drive filters.
▲ See Engine Manufacturer’s manual

**General**

Remove the ignition key to prevent unintentional movements during lubrication.
When lubricating with an oil can, it must be filled with engine oil.
When lubricating with grease, unless otherwise stated, use high grade molybdenum disulphide grease.
For daily use, the machine should be lubricated twice weekly.

Wipe away excess grease after lubrication.
It is important to avoid getting lubricant on the belts or the drive surfaces on the belt pulleys. Should this happen, attempt to clean them with spirits. If the belt continues to slip after cleaning, it must be replaced. Gasoline or other petroleum products must not be used to clean belts.
Wheel and Deck Zerks
Use only good quality bearing grease. Grease from well-known brand names (petrochemical companies, etc.) usually maintains a good quality.

Front Wheel Mount
Lubricate with a grease gun until the grease is forced out.

Front Wheel Bearings
Lubricate 3-4 strokes with a grease gun on each set of wheel bearings.

Deck Spindles
Lower the cutting deck completely. If a grease gun without rubber hose is used, the foot plate must be removed. Lubricate with a grease gun, 2-3 strokes per spindle.
Transaxle (Transmission) Fluid Change

This transaxle is designed with an external filter for ease of maintenance. To ensure constant fluid quality levels and longer life, an oil filter change interval of every 200 hours is recommended.

The following procedure is performed with the transaxles installed in the mower and the mower on level ground. Apply the pump release valve for each transaxle and set the parking brake.

1. Remove the three ¼” filter guard screws and filter guard. Clean any loose debris from around the perimeter of the filter. See illustration.
2. Place an oil drain pan (12” or more diameter and 8 qt. capacity is optimal) beneath the oil filter. Remove the oil filter from the transaxle.
3. After the oil has drained, wipe the filter base surface and apply a film of new oil to the gasket of the replacement filter.
4. Install the new filter by hand, turning it three-quarters to one full turn after the filter gasket contacts the filter base surface.
5. Reinstall the filter guard. Torque screws to 65 in/lbs. each.
6. Repeat steps on the opposite side.
7. Drain old oil filters of all free flowing oil prior to disposal. Place used oil in appropriate containers and dispose of it in accordance with laws in your area.
8. Remove the top port plug (see illustration) from the left side and right side of the transaxles prior to filling with oil. This will allow the transaxles to vent during oil fill.
9. Remove the cap from the transaxles’ expansion tank located on the vehicle frame.
10. Fill with 20W50 motor oil until oil just appears at the bottom of each transaxle’s top port (approximately 2 quarts per transaxle, 4 quarts total). Install the top port plug into each transaxle as the oil level reaches the port.
11. Install and torque the top port plugs to 180 in./lbs.
12. Continue to fill the transaxles through the expansion tank until the FULL COLD line is reached (this will take approximately 23 additional ounces).
13. Reinstall the expansion tank cap by hand. Be careful to not overtighten.

Drain old oil filters of all free-flowing oil prior to disposal. Place used oil in appropriate containers and dispose of it in accordance with laws in your area.
## TROUBLESHOOTING GUIDE

## TROUBLESHOOTING GUIDE

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
</tr>
</thead>
</table>
| Machine vibrates                            | • Blades are loose  
• Blades are incorrectly balanced  
• Engine is loose |
| Engine overheats                             | • Clogged air intake or cooling fins  
• Engine overloaded  
• Poor ventilation around engine  
• Defective engine speed regulator  
• Too little or no oil in the engine  
• Fouled spark plug |
| Battery not charging                        | • Poor contact with battery terminal cable connectors  
• Charging lead is disconnected  
• Fault in engine charging system |
| Machine moves slowly, unevenly, or not at all | • Parking brake on  
• Bypass valve on pump open  
• Drive belt for the transmission gears slack or has come off  
• Air in hydraulic system |
| Mower deck not engaging                     | • Drive belt for the mower deck has come loose  
• Contact for the electromagnetic coupling has loosened  
• Blade switch is faulty or has come loose from the cable contact  
• Fuse has blown |
| Hydraulic drive leaks oil                   | • Damaged seals, housing, or gaskets  
• Air trapped in hydraulic system |
| Uneven mowing results                       | • Unequal tire pressure on the left and right sides  
• Bent blades  
• Suspension for the mower deck is uneven  
• Blades are dull  
• Driving speed too high  
• Grass is too long  
• Grass collected under the mower deck |
Winter Storage

The machine should be readied for storage at the end of the mowing season or if it will not be in use for longer than 30 days.

Fuel allowed to stand for long periods of time (30 days or more) can leave sticky residues that can plug the carburetor and disrupt engine function.

Fuel stabilizers are an acceptable option as regards to the sticky residues that can occur during storage. Add stabilizer to the fuel in the tank or in the storage container. Always use the mixing ratios specified by the manufacturer of the stabilizer. Run the engine for at least 10 minutes after adding the stabilizer so that it reaches the carburetor. Do not empty the fuel tank and the carburetor if a stabilizer has been added.

To ready the machine for storage, follow these steps:

1. Thoroughly clean the machine, especially under the mower deck. Touch up damage to the paint and spray a thin layer of oil on the underside of the mower deck to avoid corrosion.

2. Inspect the machine for worn or damaged parts and tighten any nuts or screws that may have become loose.

3. Change the engine oil; dispose of properly.

4. Empty the fuel tanks or add a fuel stabilizer. Start the engine and allow it to run until the carburetor is drained of fuel or the stabilizer has reached the carburetor.

5. Remove the spark plug and pour about a tablespoon of engine oil into the cylinder. Turn over the engine so that the oil is evenly distributed and then refit the spark plug.

6. Lubricate all grease zerks, joints, and axles.

7. Remove the battery. Clean, charge, and store the battery in a cool place, but protect it from direct cold.

8. Store the machine in a clean, dry place and cover it for extra protection.

Service

When ordering spare parts, please specify the purchase year, model, type, and serial number.

Always use genuine Husqvarna spare parts. An annual check-up at an authorized service workshop is a good way to ensure that the machine performs its best the following season.

WARNING!

Never store an engine with fuel in the tank indoors or in poorly ventilated spaces where fuel vapor can come in contact with open flames, sparks, or a pilot light such as in a boiler, hot water tank, clothes dryer, etc. Handle the fuel with care. It is very flammable and can cause serious personal injury and property damage. Drain the fuel outdoors, into an approved container. Store the fuel away from open flame or any source of ignition. Never use gasoline for cleaning. Use a degreaser and warm water.
**TECHNICAL DATA**

**Torque Specifications**
- Engine crankshaft bolt: 50 ft/lb (67 Nm)
- Deck pulley bolts: 75 ft/lb (100 Nm)
- Lug nuts: 75 ft/lb (100 Nm)
- Blade bolt: 55 ft/lb (75 Nm)

**Hex Head Cap Screws**
The torque values shown should be used as a general guideline when specific torque values are not given.

¹) See the Engine Manufacturer's manual for engine specifications.

²) The power rating of the engines indicated is the average net power output (at specified rpm) of a typical production engine for the engine model measured to SAE standard J1349/ISO1585. Mass production engines may differ from this value. Actual power output for the engine installed in the final machine will depend on the operating speed, environmental conditions and other variables.
CONFORMITY CERTIFICATES

USA requirements
Labels are placed on the engine and/or in the engine compartment stating that the machine will fulfill the requirements. This is also applicable to special requirements for any of the states, (California emission rules etc.). Do not remove any of these labels. Certificates can also be supplied with the machine at delivery or written in the Engine manual. Take care of these valuable documents.
