1 Introduction

1.1 Introduction

| Serial number: |
| PIN code: |

The serial number is on the product rating plate and on the product carton.

• Use the serial number to register your product on www.husqvarna.com.

1.1.1 Support
For support about the product, speak to your Husqvarna servicing dealer.

1.1.2 Product description

Note: Husqvarna regularly updates the appearance and function of the products. Refer to Support on page 3.

The product is a robotic lawn mower. The product has a battery power source and cuts the grass automatically. It continuously alternates between mowing and charging. The movement pattern is random, which means that the lawn is mowed evenly and with less wear. The boundary wire and the guide wire controls the movement of the product within the work area. Sensors in the product senses when it is approaching the boundary wire. The front of the product always passes the boundary wire by a specific distance before the product turns around. When the product hits an obstacle or approaches the boundary wire the product selects a new direction.

The operator selects the operation settings with the keys on the keypad. The display shows the selected and possible operation settings, and the operation mode of the product.

1.1.2.1 Mowing technique
The product is emission free, easy to use and saves energy. The frequent cutting technique improves the grass quality and decreases the use of fertilizers. Collection of grass is not necessary.

1.1.2.2 Find the charging station
The product operates until the battery state of charge is low. Then it follows the guide wire to the charging station. The guide wire is laid from the charging station towards, for instance, a remote part of the work area or through a narrow passage. The guide wire is connected with the boundary wire and makes it much easier and faster for the product to find the charging station.

1.1.2.3 Automower® Connect
Automower® Connect is a mobile application that makes it possible to select the operation settings remotely. Refer to Automower® Connect app on page 25.
1.2 Product overview

The numbers in the figure represent:

1. Body
2. Hatch to display and keypad
3. Stop button
4. Front wheels
5. Rear wheels
6. Ultrasonic sensors
7. Headlights
8. Replaceable cover
9. Rating plate (incl. product identification code)
10. Display
11. Keypad
12. Cutting system
13. Chassis box with electronics, battery and motors
14. Main switch
15. Handle
16. Blade disc
17. Skid plate
18. Contact plates
19. LED for operation check of the charging station and boundary wire
20. Charging station
21. Power supply (the appearance may differ depending on market)
22. Cable markers
23. Measurement gauge when installing the boundary wire (the measurement gauge is broken loose from the box)
24. Screws for securing the charging station
26. Alarm decal
27. Extra blades
28. Low voltage cable
29. Couplers for the loop wire
30. Loop wire for boundary loop and guide wire
31. Stakes
32. Connectors for the loop wire

1.3 Symbols on the product
These symbols can be found on the product. Study them carefully.

WARNING: Read the user instructions before operating the product.

WARNING: Disable the product before working on or lifting the product.

WARNING: Keep a safe distance from the product when operating. Keep your hands and feet away from the rotating blades.

WARNING: Do not ride on the product. Never put your hands or feet close to or under the product.

Never use a high-pressure washer or even running water to clean the product.

Use a detachable power supply as defined on the rating label next to the symbol.

This product conforms to the applicable EC Directives.

Noise emission to surroundings. The product’s emissions are set out in Technical data on page 60 and on the rating plate.

It is not permitted to dispose this product as normal household waste. Ensure that the product is recycled in accordance with local legal requirements.

The chassis contains components which are sensitive to electrostatic discharge (ESD). The chassis must also be resealed in a professional manner. For these reasons the chassis shall only be opened by authorized service technicians. A broken seal can result in the entire or parts of the guarantee no longer being valid.

The low voltage cable must not be shortened, extended or spliced.

Do not use a trimmer nearby the low voltage cable. Be careful when trimming edges where the cables are placed.

1.4 Symbols on the display
The schedule function controls when the product cuts the lawn.

The cutting height function sets the cutting height of the product.

The security function lets the operator select between 3 security levels.

The messages function shows error messages and possible cause for the problems.

The weather timer function automatically adapts the cutting intervals to the grass growth.

4 Is a part of the Installation kit which is purchased separately.
The installation function for manual settings for the installation.

The settings function is where the general settings for the products are set.

The accessories function is where all settings for the accessories for the product are set.

The product will not cut the grass due to the schedule function.

The product overrides the schedule function.

The battery indicator shows the charge level of the battery. When the product charges the symbol flashes.

The product is put in the charging station but do not charge the battery.

The product is set in ECO-mode.

For Automower® Connect and Connect@Home. Bluetooth® wireless communication with your mobile device.

The GPS-supported navigation is active. Flashes as it collects GPS information. Automower® 430X/450X.

The GPS-supported navigation is not active. Automower® 430X/450X.

The signal strength of the GPRS reception.

Problem with the connection to the Internet server.

Problem with the SIM card or the module.

1.5 Symbols on the battery

Read the user instructions.

Do not discard the battery into fire and do not expose the battery to a heat source.

Do not immerse the battery into water.

1.6 General manual instructions

The following system is used in the Operator’s Manual to make it easier to use:

- Text written in *italics* is a text that is shown in the display or is a reference to another section in the Operator’s Manual.
- Text written in **bold** is one of the buttons on the product.
- Text written in **UPPERCASE** and *italics* refer to the different operating modes available in the product.

Introduction - 9
1.10 Display
The display on the product shows information and settings of the product.

To access the display, push the STOP button.

1.11 Keypad
Use the keypad on the product to navigate in the menu. To access the keypad, push the STOP button.

- Use the START button (A) to start the operation of the product.
- Use the BACK button (B) to move up in the menu lists.
- Use the arrow buttons (C) to navigate in the menu.
- Use the OK button (D) to confirm the settings you select in the menus.
- Use the MENU button (E) to go to the main menu.
- Use the PARK button (F) to send the product to the charging station.
- Use the number buttons (G) to enter PIN code, time and date.
2.1 Safety information

2.1.1 IMPORTANT. READ CAREFULLY BEFORE USE. KEEP FOR FUTURE REFERENCE

The operator is responsible for accidents or hazards occurring to other people or property.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities (that could affect a safe handling of the product), or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Local regulations may restrict the age of the operator. Cleaning and maintenance shall not be made by children without supervision.

Never connect the power supply to an outlet if the plug or cord is damaged. Worn or damaged cord increase the risk of electric shock.

Only charge the battery in the included charging station. Incorrect use may result in electric shock, overheating or leaking of corrosive liquid from the battery. In the event of leakage of electrolyte, flush with water/neutralizing agent. Seek medical help if it comes in contact with the eyes.

Use only original batteries recommended by the manufacturer. Product safety cannot be guaranteed with other than original batteries. Do not use non-rechargeable batteries.
The appliance must be disconnected from the supply mains when removing the battery.

**WARNING:** The product can be dangerous if used incorrectly.

**WARNING:** Do not use the product when persons, especially children, or animals are in the work area.

**WARNING:** Keep your hands and feet away from the rotating blades. Never put your hands or feet close to or under the product when the motor is running.

**WARNING:** In the event of an injury or accident seek medical help.

### 2.2 Safety definitions

Warnings, cautions and notes are used to point out specially important parts of the manual.

**WARNING:** Used if there is a risk of injury or death for the operator or bystanders if the instructions in the manual are not obeyed.

**CAUTION:** Used if there is a risk of damage to the product, other materials or the adjacent area if the instructions in the manual are not obeyed.

### 2.3 Safety instructions for operation

#### 2.3.1 Use

- The product may only be used with the equipment recommended by the manufacturer. All other types of use are incorrect. The manufacturer’s instructions with regard to operation/maintenance must be followed precisely.
- Warning signs shall be placed around the work area of the product if it is used in public areas. The signs shall have the following text: **Warning! Automatic lawnmower! Keep away from the machine! Supervise children!**

- Use the operating mode *Park* or switch off the product when persons, especially children, or animals, are in the work area. It is recommended to program the product for use during hours when the area is free from activity, e.g. at night. Refer to *Schedule on page 26.* Consider that certain animals, e.g. hedgehogs, are active at night. They can potentially be harmed by the product.
• The product may only be operated, maintained and repaired by persons that are fully conversant with its special characteristics and safety regulations. Please read the Operator’s Manual carefully and make sure you understand the instructions before using the product.
• It is not permitted to modify the original design of the product. All modifications are made at your own risk.
• Check that there are no foreign objects such as stones, branches, tools or toys on the lawn. If the blades hit foreign objects the blades can be damaged. Always switch off the product with the main switch before clearing a blockage. Inspect the product for damage before starting the product again.

If the product starts to vibrate abnormally, switch off the product with the main switch. Examine the product for damages before you start the product again.
• Start the product according to the instructions. When the product is switched on, make sure to keep your hands and feet away from the rotating blades. Never put your hands and feet under the product.
• Never touch moving hazardous parts, such as the blade disc, before it has come to a complete stop.
• Never lift up the product or carry it around when it is switched on.
• Do not let persons who do not know how the product works and behaves use it.
• The product must never be allowed to collide with persons or other living creatures. If a person or other living creature comes in the product’s way it shall be stopped immediately. Refer to To stop the product on page 40.
• Do not put anything on top of the product or its charging station.

• Do not allow the product to be used with a defective guard, blade disc or body. Neither should it be used with defective blades, screws, nuts or cables. Never connect a damaged cable, or touch a damaged cable before it is disconnected from the supply.
• Do not use the product if the Main switch does not work.
• Always switch off the product using the Main switch when the product is not in use. The product can only start when the Main switch has been switched on and the correct PIN code has been entered.
• Husqvarna® does not guarantee full compatibility between the product and other types of wireless systems such as remote controls, radio transmitters, hearing loops, underground electric animal fencing or similar.
• Metal objects in the ground (for example reinforced concrete or anti-mole nets) can result in a stoppage. The metal objects can cause interference with the loop signal which then can lead to a stoppage.
• Operation and storage temperature is 0-50 °C / 32-122 °F. Temperature range for charging is 0-45 °C / 32-113 °F. Too high temperatures might cause damage to the product.

2.3.2 Battery safety

WARNING: Lithium-ion batteries can explode or cause fire if disassembled, short-circuited, exposed to water, fire, or high temperatures. Handle carefully, do not dismantle, open the battery or use any type of electrical/mechanical abuse. Avoid storage in direct sunlight.

For more information about the battery, refer to Battery on page 43

2.3.3 How to lift and move the product

WARNING: The product must be switched off before lifting it. The product is disabled when the Main switch is in position 0.
To safely move from or within the work area:

1. Push the STOP button to stop the product.
2. Set the main switch in position 0.
3. Carry the product by the handle with the blade disc away from the body.

2.3.4 Maintenance

WARNING: The product must be switched off before any maintenance is done. Use the plug to disconnect the charging station before any cleaning or maintenance of the charging station or the loop wire.

2.3.5 In the event of a thunderstorm

To reduce the risk of damage to electrical components in the product and the charging station, we recommend that all connections to the charging station are disconnected (power supply, boundary wire and guide wire) if there is a risk of a thunderstorm.

1. Mark the wires to simplify reconnecting. The charging station's connections are marked AR, AL and G1/G2/G3.
2. Disconnect all connected wires and the power supply.
3. Connect all the wires and the power supply if there is no longer a risk of thunder. It is

Inspect the product weekly and replace any damaged or worn parts. Refer to Maintenance on page 42.
important that each wire is connected to the right place.
3 Installation

3.1 Introduction - Installation

**WARNING:** Read and understand the safety chapter before you install the product.

**CAUTION:** Use original spare parts and installation material.

Note: Refer to www.husqvarna.com for more information about installation.

3.2 Main components for installation

The installation involves the following components:

- A robotic lawn mower that mows the lawn automatically.
- A charging station, which has 3 functions:
  - To send control signals along the boundary wire.
  - To send control signals along the guide wire so that the product can follow the guide to specific remote areas in the garden and can find its way back to the charging station.
  - To charge the product.
- A power supply, which is connected to the charging station and a 100-240V wall socket.
- Loop wire, which is laid around the work area and around objects and plants that the product must not run into. The loop wire is used both as boundary wire and guide wire.

3.3 General preparations

**CAUTION:** Holes with water in the lawn can cause damage to the product.

Note: Read through the Installation chapter before beginning the installation. How the installation is done affects how the product performs. It is therefore important to plan the installation carefully.

- Make a blueprint of the work area and include all obstacles. This makes it easier to see the ideal positions for the charging station, the boundary wire and the guide wire.
- Make a mark on the blueprint where to put the charging station, the boundary wire and the guide wire.
- Make a mark on the blueprint where the guide wire connects to the boundary wire. Refer to To install the guide wire on page 23.
- Fill in holes in the lawn.
- Cut the grass before you install the product. Make sure that the grass is maximum 10 cm / 3.9 in.

Note: The first weeks after installation the perceived sound level when cutting the grass may be higher than expected. When the product has cut the grass for some time, the perceived sound level is much lower.

3.4 Before the installation of the wires

You can select to attach the wires with stakes or bury them. You can use the 2 procedures for the same work area.

- Bury the boundary wire or the guide wire if you are going to use a dethatcher on the work area. If not, attach the boundary wire or guide wire with stakes.

3.4.1 To examine where to put the charging station

- Keep a minimum 3 m / 10 ft. of free space in front of the charging station. Refer to To examine where to put the guide wire on page 20.
- Keep a minimum of 1.5 m / 5 ft. of free space to the right and left of the center of the charging station.
- Put the charging station near a power outlet.
- Put the charging station on a level surface.
3.4.2 To examine where to put the power supply

- Put the charging station in the lower section of the work area.
- Put the charging station in an area with protection from the sun.
- If the charging station is installed on an island, make sure to connect the guide wire to the island. Refer to To make an island on page 19.

WARNING: Do not cut or extend the low-voltage cable. There is a risk of electrical shock.

CAUTION: Make sure that the blades on the product do not cut the low-voltage cable.

WARNING: The power supply cable and extension cable must be outside the work area to avoid damage to the cables.

CAUTION: Do not put the low-voltage cable in a coil or below the charging station plate. The coil causes interference with the signal from the charging station.

• Put the power supply in an area with a roof and protection from the sun and rain.
• Put the power supply in an area with good airflow.
• Use a residual-current device (RCD) when you connect the power supply to the power outlet.

Low-voltage cables of different lengths are available as accessories.

3.4.3 To examine where to put the boundary wire

CAUTION: If the work area is adjacent to water bodies, slopes, precipices or a public road, the boundary wire must have a protective wall. The wall must be minimum 15 cm / 6 in. in height.

CAUTION: Do not let the product operate on gravel.

CAUTION: Do not make sharp bends when you install the boundary wire.

CAUTION: For careful operation without noise, isolate all obstacles such as trees, roots and stones.

The boundary wire should be put as a loop around the work area. Sensors in the product senses when the product approaches the boundary wire, and the product selects another direction.

To make the connection easier between the guide wire and the boundary wire, it is
recommended to make an eyelet where the guide wire will be connected. Make the eyelet with approximately 20 cm / 8 in. of the boundary wire.

Note: Make a blueprint of the work area before you install the boundary wire and guide wire.

- Put the boundary wire around all of the work area (A). Adapt the distance between the boundary wire and obstacles.
- Put the boundary wire 35 cm / 14 in. (B) from an obstacle that is more than 5 cm / 2 in. high.
- Put the boundary wire 30 cm / 12 in. (C) from an obstacle that is 1-5 cm / 0.4-2 in. high.
- Put the boundary wire 10 cm / 4 in. (D) from an obstacle that is less than 1 cm / 0.4 in. high.
- If you have a paving stone path that is in level with the lawn, put the boundary wire below the paving stone.
  Note: If the paving stone is minimum 30 cm / 12 in. wide, use the factory setting for the Drive Past Wire function to cut all the grass adjacent to the paving stone. Refer to To set the Drive Past Wire function on page 33.
- If you make an island, put the boundary wire that runs to and from the island near together (E). Put the wires in the same stake. Refer to To make an island on page 19.
• Make an eyelet (F) where the guide wire is to be connected to the boundary wire.

3.4.3.1 To put the boundary wire in a slope
The product can operate in 45% slopes. Slopes that are too steep must be isolated with the boundary wire. The gradient (%) is calculated as height per m. Example: 10 cm / 100 cm = 10%.

• For slopes steeper than 45% inside the work area, isolate the slope with boundary wire.
• For slopes steeper than 15% along the outer edge of the lawn, put the boundary wire 20 cm / 8 in. (A) from the edge.

3.4.3.2 Passages
A passage is a section that has boundary wire on each side and that connects 2 work areas. The passage must be a minimum of 60 cm / 24 in. between the boundary wire.

Note: If a passage is less than 2 m / 6.5 ft. wide, install a guide wire through the passage.

The product always runs to the left of the guide wire as seen facing the charging station. Make sure that the guide wire has as much free area as possible to the left of the guide wire.

3.4.3.3 To make an island

CAUTION: Do not put a section of boundary wire across the other. The sections of boundary wire must be parallel.

CAUTION: Do not put the guide wire across the boundary wire, for example a boundary wire that goes to an island.

Some obstacles can withstand a collision, for example, trees or bushes taller than 15 cm / 6 in. The product will collide and then turn around with this type of obstacle. However, obstacles that slope slightly, for example stones or large trees
with raised roots, must be isolated or removed. The product can run onto this kind of obstacle causing the blades to be damaged. Use the boundary wire to isolate areas inside the work area by creating islands. When the boundary wires to and from the island are put close together, the product can run over the wire.

**Note:** To achieve careful and silent operation, it is recommended to isolate all fixed objects in the work area.

- Put the boundary wire to and around the obstacle to make an island.
- Put the 2 sections of boundary wire that run to and from the obstacle close together without crossing.
- Put the 2 sections of boundary wire in the same stake.

### 3.4.3.4 To make a secondary area

Make a secondary area (B) if the work area has 2 areas that are not connected with a passage. The work area with the charging station is the main area (A).

**Note:** The product must be manually moved between the main area and the secondary area.

- Put the boundary wire around the secondary area (B) to make an island. Refer to *To make an island on page 19.*

**Note:** The boundary wire must be put as 1 loop around all of the work area (A + B).

**Note:** When the product cuts grass in the secondary area, the *Secondary area* mode must be selected. Refer to *Operating mode Start on page 39.*

### 3.4.4 To examine where to put the guide wire

- Put the guide wire in a line at a minimum of 2 m / 6.5 ft. in front of the charging station.
- Make as much free area as possible to the left of the guide wire when facing the charging station. Refer to *Corridor width on page 32.*
- Put the guide wire minimum 30 cm / 12 in. from the boundary wire.
- Do not make sharp bends when you install the guide wire.

- If the work area has a slope, put the guide wire diagonally across the slope.
3.4.5 Work area examples

- If the charging station is put in a small area (A), make sure that the distance to the boundary wire is at a minimum 3 m / 10 ft. in front of the charging station.
- If the work area has a passage (B), make sure that the distance to the boundary wire is at a minimum 2 m / 6.5 ft. If the passage is smaller than 2 m / 6.5 ft., install a guide wire through the passage. Minimum passage between the boundary wire is 60 cm / 24 in.
- If the work area has areas which are connected by a narrow passage (B), you can set the product to first follow and then leave the guide wire after a certain distance (C). The settings can be changed in Lawn Coverage on page 29.
- Use the GPS Assisted Navigation that helps the product select the most optimal operation. Refer to To set the GPS Assisted Navigation on page 30.
- If the work area includes a secondary area (D), refer to To make a secondary area on page 20. Put the product in the secondary area and select Secondary area mode.

3.5 Installation of the product

3.5.1 Installation tools

- Hammer/plastic mallet: To simplify putting the stakes into the ground.
- Edge cutter/straight spade: To bury the boundary wire.
- Combination pliers: For cutting the boundary wire and pressing the connectors together.
- Adjustable plier: For pressing the couplers together.

3.5.2 To install the charging station

WARNING: Obey national regulations about electrical safety.

WARNING: The product is only to be used with the power supply unit supplied by Husqvarna.
**WARNING:** Do not put the power supply at a height where there is a risk it can be put in water. Do not put the power supply on the ground.

**WARNING:** Do not encapsulate the power supply. Condensed water can harm the power supply and increase the risk of electrical shock.

**WARNING:** Risk of Electric Shock. Install only to an residual-current device when connecting the power supply to the wall socket. Applicable to USA/Canada. If power supply is installed outdoors: Risk of Electric Shock. Install only to a covered Class A GFCI receptacle (residual-current device) that has an enclosure that is weatherproof with the attachment plug cap inserted or removed.

**CAUTION:** Do not make new holes in the charging station plate.

**CAUTION:** Do not put your feet on the baseplate of the charging station.

**WARNING:** The power supply cable and the extension cable must be outside the work area to avoid damage to the cables.

When connecting the power supply, only use a wall socket that is connected to an residual-current device.

1. Read and understand the instructions about the charging station. Refer to *To examine where to put the charging station on page 16.*

2. Put the charging station in the selected area.

*Note:* Do not attach the charging station to the ground with the screws until the guide wire is installed. Refer to *To install the guide wire on page 23.*

3. Connect the low-voltage cable to the charging station.

4. Put the power supply at a minimum height of 30 cm / 12 in.

5. Connect the power supply cable to a 100-240V power outlet.

*Note:* When the charging station is connected, it is possible to charge the product. Place the product in the charging station while the boundary and guide wires are being laid. Switch on the product. Do not continue with any product settings before the installation is complete.

6. Put the low-voltage cable in the ground with stakes or bury the cable. Refer to *To put the wire into position with stakes on page 24 or To bury the boundary wire or the guide wire on page 24.*

7. Connect the wires to the charging station after the installation of boundary wire and guide wire is complete. Refer to *To install the boundary wire on page 22 and To install the boundary wire on page 22.*

8. Attach the charging station to the ground with the supplied screws after the guide wire is installed. Refer to *To install the guide wire on page 23.*

### 3.5.3 To install the boundary wire

**CAUTION:** Do not put remaining wire in a coil. The coil causes interference with the product.

1. Put the boundary wire around all of the work area. Start and complete the installation behind the charging station.
2. Open the connector and put the boundary wire in the connector.

3. Close the connector with a pair of pliers.

4. Cut the boundary wire 1-2 cm / 0.4-0.8 in. above each connector.

5. Push the right connector onto the metal pin on the charging station with the mark "AR".

6. Push the left connector onto the metal pin on the charging station with the mark "AL".

3.5.4 To install the guide wire

**CAUTION:** Twinned cables, or a screw terminal block that is insulated with insulation tape are not satisfactory splices. Soil moisture will cause the wire to oxidize and after a time result in a broken circuit.

1. Open the connector and put the wires in the connector.

2. Close the connector with a pair of pliers.

3. Cut the guide wires 1-2 cm / 0.4-0.8 in. above each connector.

4. Put the guide wires centrally below the charging station plate, and push them through the slot in the charging station tower.

5. Push the connector onto the metal pin on the charging station with the mark "G1, G2" or "G3".

6. Disconnect the charging station from the power outlet.

7. Put the cable mark on the guide wires.

8. Put the end of the guide wires at the eyelet on the boundary wire.

9. Cut the boundary wire with a pair of wire cutters.

10. Connect the guide wires to the boundary wire with a coupler.

   a) Put the 2 ends of the boundary wire and the end of the guide wires into the coupler.

   **Note:** Make sure that you can see the end of the guide wires through the transparent area of the coupler.

   b) Push the button on the coupler with an adjustable pliers.

11. Attach the guide wires to the ground with stakes or bury the guide wires in the ground. Refer to *To put the wire into position with stakes on page 24* or *To bury the boundary wire or the guide wire on page 24.*

12. Connect the charging station to the power outlet.
3.6 To put the wire into position with stakes

**CAUTION:** Make sure that the stakes hold the boundary wire and the guide wire against the ground.

**CAUTION:** Cutting the grass too low right after installation can damage the wire insulation. Damage to the insulation may not cause disruptions until several weeks or months later.

1. Put the boundary wire and the guide wire on the ground.
2. Put the stakes at a maximum of 75 cm / 30 in. distance from each other.
3. Attach the stakes to the ground with a hammer or a plastic mallet.

**Note:** The wire is overgrown with grass and not visible after a few weeks.

3.7 To bury the boundary wire or the guide wire

- Cut a groove in the ground with an edge cutter or a straight shovel.
- Put the boundary wire or the guide wire 1-20 cm / 0.4-8 in. into the ground.

3.8 To extend the boundary wire or the guide wire

**Note:** Extend the boundary wire or the guide wire if it is too short for the work area. Use original spare parts, for example couplers.

1. Disconnect the charging station from the power outlet.
2. Cut the boundary wire or the guide wire with a pair of wire cutters where it is necessary to install the extension.
3. Add wire where it is necessary to install the extension.
4. Put the boundary wire or the guide wire into position.
5. Put the wire ends into a coupler.

**Note:** Make sure that you can see the ends of the boundary wire or the guide wire through the transparent area of the coupler.

6. Push the button on the coupler with an adjustable pliers.

7. Put the boundary wire or the guide wire into position with stakes.
8. Connect the charging station to the power outlet.

3.9 After the installation of the product

3.9.1 To do a visual check of the charging station

1. Make sure that the indicator LED lamp on the charging station has a green light.

2. If the indicator LED lamp does not have a green light, do a check of the installation. Refer to To install the charging station on page 21 and Indicator lamp in the charging station on page 54.

3.9.2 To do the basic settings

Before the product starts to operate for the first time, you must do the basic settings.

1. Put the product in the charging station.
2. Switch on the product.
3. Push the arrow buttons and the OK button. Select language, country, date, time and set a PIN code.
Note: For some models, a factory PIN code is necessary before you select a personal PIN code. It is not possible to use 0000 as PIN code.

4. Push the Start button and close the hatch to initiate a calibration process of the product.

Note: If the battery is too low, the product needs to charge the batteries fully before the calibration starts. Refer to Calibration on page 25.

Note: Make a note of the PIN code. Refer to Introduction on page 3.

3.9.3 Calibration
The calibration process is automatic. After the basic settings are done, the product moves away from the charging station and stops, while it calibrates some of the product settings. When the calibration is complete, the product starts to mow.

3.10 Automower® Connect app
The app gives 2 modes of connectivity: Long-range cellular connectivity and Short-range Bluetooth® connectivity.

The product can connect to mobile devices that have the Automower® Connect app installed. Automower® Connect is a free app for your mobile device. The Automower® Connect app gives extended functions to your Husqvarna product. You can:

- See the status of your product.
- Change settings to your product.
- Get extended product information.
- Get an alarm if the product moves out of the work area.

To pair the product with the app, refer to To pair Automower® Connect and the product on page 36 and To pair Connect@Home and the product on page 36.

Note: If the cellular connectivity does not work or if you have not created a Husqvarna account, Automower® Direct can be used to access the product with Short-range Bluetooth® connectivity.

Refer to To start to use Automower® Direct on page 37.

Note: All countries do not support Automower® Connect because of regional specified cellular systems. The included Automower® Connect lifetime service only applies if there is a third part sub-supplier of 2G/3G/4G available in the operational area. In some countries Bluetooth® is not available due to legal reasons.

3.10.1 To install the Automower® Connect app
1. Download the Automower® Connect app on your mobile device.
2. Sign up for a Husqvarna account in the Automower® Connect app.
3. An e-mail is sent to the registered e-mail address. Follow the instructions in the e-mail in less than 24 hours to validate your account.
4. Log in to your Husqvarna account in the Automower® Connect app.

3.10.2 Automower® Connect menu
The main menu in Automower® Connect offers 4 options:

- Dashboard
- Map
- Settings
- Messages (only available for Bluetooth short-range connectivity)

3.10.3 Dashboard
The dashboard shows the current status of the product both visually and in text. It is very easy to control the product by selecting the options, for example Park.

In the lower part of the dashboard there are shortcuts to the Schedule settings and the Map. The dashboard also shows symbols according to below:

1. The battery status shows the battery state of charge. A flash is shown over the battery symbol when the product charges its battery. A plug is shown over the battery symbol when the product is in the charging station without charging.
2. Cutting height.

For more information about the operating modes Start, Park and Pause, refer to Operating mode Start on page 39.

3.10.3.1 Map

The map shows the current position of the product and the set centerpoint for GeoFence.

3.10.3.2 Settings in Automower® Connect

The product has factory settings but the settings can be adapted to each work area.

Most of the settings in the Automower® Connect app can be set in the display of the product. Refer to Display on page 10.

3.10.3.3 Messages

In this menu the previous fault and information messages can be found. For some of the messages, there are tips and advice to help to rectify the fault.

Note: The Messages menu is only available for Bluetooth® short-range connectivity.

3.11 To do the product settings

All commands and settings for the product are done via the control panel. The control panel consists of a display and a keypad, and all functions are accessed through the menus. The functions have factory settings to suit most work areas, but the settings can be adapted to the unique situation for each work area.

3.12 To get access to the menu

1. Push the STOP button.
2. Use the number buttons and the OK button to enter the PIN code.
3. Push the MENU button.

3.12.1 Menu structure

The main menu contains:
- Schedule
- Cutting height
- Security
- Messages
- Weather timer
- Installation
- Settings
- Accessories

Refer to Menu structure overview 1 on page 7, Menu structure overview 2 on page 8 and Menu structure overview 3 on page 9.

3.12.2 Schedule

Note: The lawn should not be cut too often to obtain the best result. If the product is allowed to operate too much, the lawn may appear flattened. The product is also subjected to unnecessary wear.

3.12.2.1 To set the schedule

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Schedule > Overview.
3. Use the arrow buttons and the OK button to select the day.
4. Use the right arrow button to select the period.
5. Push the OK button.
6. Calculate the suitable operating hours. Refer to To calculate the suitable operating hours on page 27.
7. Enter the time with the number buttons. The product can cut the grass 1 or 2 periods each day.

8. If the product must not cut grass on a specified day, unselect the box adjacent to the 2 time periods.

3.12.2.2 To calculate the suitable operating hours

If the work area is less than maximum product capacity, the schedule should be set to minimize wear on the lawn and the product.

1. Calculate the dimension of your lawn in m² / ft².
2. Divide the m² / ft² of the lawn with the approximate daily operation capacity. Refer to table below.
3. The result is equal to the number of hours that the product must mow each day. The number of hours includes both mowing, searching and charging time.

<table>
<thead>
<tr>
<th>Product work capacity</th>
<th>Approximate daily operation capacity, m²/h, ft²/h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Automower® 420</td>
<td>92 / 990</td>
</tr>
<tr>
<td>Automower® 430X</td>
<td>133 / 1430</td>
</tr>
<tr>
<td>Automower® 440</td>
<td>167 / 1800</td>
</tr>
<tr>
<td>Automower® 450X</td>
<td>208 / 2240</td>
</tr>
</tbody>
</table>

Example: A lawn of 500 m² / 5400 ft², cut with a Automower® 420.
500 m² / 92 ≈ 5.5 h.
5400 ft² / 990 ≈ 5.5 h.

3.12.2.3 To copy the schedule setting

1. Do steps 1–3 in To get access to the menu on page 26.

3.12.2.4 To reset the schedule setting

You can remove all schedule settings and use the factory setting.

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Schedule > Overview > Reset.
   a) Push the arrow buttons to select Current day to only reset the current day to factory settings.
   b) Push the arrow buttons to select All week to reset all schedule settings to factory settings.
3. Push the OK button.

3.12.2.5 Cutting height

The cutting height can be varied from MIN (2 cm / 0.8 in.) to MAX (6 cm / 2.4 in.).

Note: The height adjustment setting is shown in the display of the product as a scale/numerical value.

CAUTION: During the first weeks after a new installation, the cutting height must be set to MAX to avoid damaging the loop wire. After this, the cutting height can be lowered step by step every week until the desired cutting height has been reached.
3.12.2.6 Security level

There are 3 security levels for the product.

<table>
<thead>
<tr>
<th>Function</th>
<th>Low</th>
<th>Medium</th>
<th>High</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm</td>
<td></td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>PIN-code</td>
<td>X</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>Time lock</td>
<td>X</td>
<td>X</td>
<td></td>
</tr>
</tbody>
</table>

- **Alarm** - An alarm goes off if the PIN-code is not entered within 10 seconds after the STOP button is pushed. The alarm also goes off when the product is lifted. The alarm stops when the PIN-code is entered.
- **PIN-code** - The correct PIN-code must be entered to get access to the Menu structure of the product. If the incorrect PIN-code is entered 5 times, the product is locked for a time. The lock is extended for each new incorrect try.
- **Time lock** - The product locks if the PIN-code has not been entered in 30 days. Enter the PIN-code to get access to the product.

**To set the security level**
Select 1 of 3 security levels for your product.

1. Do steps 1–3 in *To get access to the menu on page 26*.
2. Use the *arrow buttons* and the *OK* button to move through the menu structure *Security > Security level*.
3. Use the *arrow buttons* and the *OK* button to select the level of security.
4. Push the *OK* button.

**To create a New loop signal**
The loop signal is randomly selected to create a unique link between the product and the charging station. In rare cases, there may be a need to generate a new signal, for instance if two adjacent installations have a very similar signal.

1. Place the product in the charging station.
2. Do steps 1–3 in *To get access to the menu on page 26*.
3. Use the *arrow buttons* and the *OK* button to move through the menu structure *Security > Advanced > New loop signal*.
4. Await confirmation that the loop signal has been generated. This normally takes about 10 seconds.

**To change the PIN-code**

1. Do steps 1–3 in *To get access to the menu on page 26*.
2. Use the *arrow buttons* and the *OK* button to move through the menu structure *Settings > Security > Advanced > Change PIN-code*.
3. Enter the new PIN code.
4. Push the *OK* button.
5. Enter the new PIN code.
6. Push the *OK* button.
7. Make a note of the new PIN code. Refer to *Introduction on page 3*.

**To change the duration of the alarm**

1. Do steps 1–3 in *To get access to the menu on page 26*.
2. Use the *arrow buttons* and the *OK* button to move through the menu structure *Security > Advanced > Duration > Duration of alarm*.
3. Use the *arrow buttons* to select a time interval of 1 to 20 minutes.
4. Push the *BACK* button.

**To change the duration of the time lock**

1. Do steps 1–3 in *To get access to the menu on page 26*.
2. Use the *arrow buttons* and the *OK* button to move through the menu structure *Security > Advanced > Duration > Duration of time lock*.
3. Use the *number buttons* to select a time interval of 1–90 days.
4. Push the *BACK* button.

3.12.7 Messages

In this menu the previous fault and information messages can be found. For some of the messages, there are tips and advice to help to rectify the fault. Refer to *Troubleshooting on page 45*. 
If the product is disrupted in any way, for example it is trapped or the battery is low, a message is saved relating to the disruption and the time it happened.

If the same message is repeated several times, this may indicate that an adjustment to the installation or the product is required. Refer to Installation on page 16.

To read the messages
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Messages > Fault messages and Messages > Info messages.
3. Read the messages and read the Troubleshooting to get information and recommendations to correct the faults.

3.12.3 Weather timer

Weather timer automatically adjust the cutting time to the growth of the grass. The product is not permitted to operate more than the schedule settings.

Note: When using Weather timer, it is recommended to make as much operating time as possible available for Weather timer. Do not restrict the schedule more than necessary.

The first operation of the day is set by the schedule settings. The product always complete 1 mowing cycle, and then Weather timer selects if the product will continue to operate or not.

Note: Weather timer is reset if the product does not operate for more than 50 hours, or if a Reset of all user settings is done. Weather timer is not changed if a Reset of schedule settings is done.

3.12.3.1 To set the Weather timer
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Weather timer > Use Weather timer.
3. Push the OK button to select the Weather timer.
4. Push the BACK button.

3.12.3.2 To set the Weather timer frequency
Set how frequently the product cuts the grass when the Weather timer is in use. There are 3 frequency levels: Low, Mid and High. The higher the frequency, the more sensitive the product is to the grass growth. That is, if the grass growth is high then the product is allowed to work longer.

Note: If the mowing results are not optimal when using Weather timer, the schedule settings may need adjusting. Do not restrict the schedule more than necessary. Also, check that the blade disc is clean and that the blades are in good condition.

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Weather timer > Cutting time.
3. Use the arrow buttons to select Low, Mid or High frequency.
4. Push the BACK button.

3.12.4 Lawn Coverage
If the work area includes remote parts that are connected with narrow passages, the Lawn Coverage function is useful to be able to maintain a well-cut lawn in all parts of the yard. A guide wire must be installed to use the functions. You can set a maximum of 3 remote areas.

With the Lawn Coverage function the product first follows and then leaves the guide wire after a certain distance and starts to mow the lawn.

Area A, approximately 50%
Area B, approximately 30%
Area C, approximately 20%
3.12.4.1 GPS Assisted Navigation
Only for Automower® 430X/450X.

The GPS Assisted Navigation function helps the product to select the most optimal operation. Use the Lawn coverage function to do manual settings.

To set the GPS Assisted Navigation
Disable the GPS Assisted Navigation to make manual settings in Lawn coverage.

Note: It is recommended to use GPS Assisted Navigation.

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Installation > Lawn coverage.
3. Push the OK button to enable or disable the function.
4. Push the BACK button.

3.12.4.2 To set the Lawn Coverage function

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Installation > Lawn Coverage > Area 1-3.
3. Use the arrow button to select the area.
4. Push the OK button.
5. Measure the distance from the charging station to the start of the area. Measure along the guide wire. Refer to To measure the distance from the charging station on page 30.
6. Push the number buttons to select the distance.
7. Push the OK button.
8. Use the number buttons to select the percentage of the cutting time the product must cut the area. The percentage is equal to the area in relation to the complete work area.
   a) Measure the area.
   b) Divide the measured area with the total work area.
   c) Convert the result to percentage.

Note: The sum of Area 1-3 must be 100% or less. If the sum is less than 100%, the product sometimes starts to mow at the charging station. Refer to To set the exit angle on page 32.
9. Push the BACK button.

3.12.4.3 To do a test of the Lawn Coverage function

1. Put the product in the charging station.
2. Do step 1-3 in To get access to the menu on page 26.
3. Use the arrow buttons and the OK button to move through the menu structure Installation > Lawn Coverage > Area 1-3 > More > Test.
4. Push the OK button.
5. Push the START button.
6. Close the hatch.
7. Make sure the product can find the area.

3.12.4.4 To measure the distance from the charging station

1. Put the product in the charging station.
2. Do steps 1–3 in To get access to the menu on page 26.
3. Use the arrow buttons and the OK button to move through the menu structure Installation > Lawn Coverage > Area 1-3 > How far?
4. Use the number buttons to set 500 m / 500 yd as a distance.
5. Push the OK button.
6. Use the arrow buttons and the OK button to move through the menu structure Settings > Lawn Coverage > Area 1-3 > More > Test.

7. Push the OK button.

8. Push the STOP button when the product is at the distance you select to measure. The distance shows in the display.

3.12.4.5 To disable or enable the Lawn Coverage function

Disable or enable the Lawn Coverage function for each area.

1. Do steps 1–3 in To get access to the menu on page 26.

2. Use the arrow buttons and the OK button to move through the menu structure Installation > Lawn Coverage > Area 1-3 > Disable.

3. Push the OK button.

4. Push the BACK button.

3.12.4.6 To reset the Lawn Coverage settings

You can reset the Lawn Coverage settings for each area and use the factory setting.

1. Do steps 1–3 in To get access to the menu on page 26.

2. Use the arrow buttons and the OK button to move through the menu structure Installation > Lawn Coverage > Area 1-3 > More > Reset.

3. Push the OK button.

3.12.5 Methods for the product to find the charging station

The product has 3 search methods to find the charging station:

- Irregular - The product moves in the work area until it finds the signal of the charging station.
- Guide wire - The product moves in the work area until it finds the guide wire. The product moves along the guide wire to the charging station.
- Boundary wire - The product moves in the work area until it finds the boundary wire. The product moves along the boundary wire to the charging station.

The factory setting is set to mix the 3 search methods. When the battery is low the product starts to search for the charging station with the irregular method for 3 min. After 3 min the product changes search method to the guide wire method. The product tries to find the guide wire for 8 min. After 11 min the product changes search method to the boundary wire method.

You can change the settings for how the product finds the charging station to adapt to the work area.

3.12.5.1 To set how the product finds the charging station

You can make manual settings to make the product search for the guide wire or the boundary wire in 0–30 min from when the battery is low.

1. Do steps 1–3 in To get access to the menu on page 26.

2. Use the arrow buttons and the OK button to move through the menu structure Installation > To find the charging station > Overview of search methods > Guide.

3. Push the arrow buttons to select 1 of the guide wires.

4. Push the number buttons to set the time.

5. Push the OK button.

6. Push the BACK button.

7. Use the arrow buttons and the OK button to move through the menu structure Installation > To find the charging station > Overview of search methods > Boundary wire.

8. Push the number buttons to set the time.

9. Push the OK button.

10. Push the START button and close the hatch.

3.12.5.2 To do a test of the guide wire

1. Do steps 1–3 in To get access to the menu on page 26.

2. Use the arrow buttons and the OK button to move through the menu structure Installation > Find charging station > Guide > More > Test guide.

3. Put the product 3 m / 9 ft. from the boundary wire.

4. Push the START button and close the hatch.

5. Make sure the product follows the guide wire to the charging station.

6. Make sure the product docks with the charging station.
7. If the product does not dock with the charging station, change the position of the charging station or the guide wire. Refer to To install the charging station on page 21 and To install the guide wire on page 23.

### 3.12.5.3 To do a test of the boundary wire

1. Put the product 3 m / 9 ft. from the boundary wire, facing the boundary wire.
2. Do steps 1–3 in To get access to the menu on page 26.
3. Use the arrow buttons and the OK button to move through the menu structure Installation > Find charging station > Overview of search methods > Boundary > More > Test right / Test left.
4. Push the START button and close the hatch.
5. Make sure the product follows the guide wire to the charging station.
6. Make sure the product docks with the charging station.
7. Change the position of the charging station or the guide wire if the product does not dock with the charging station. Refer to To install the charging station on page 21 and To install the guide wire on page 23.

### 3.12.5.4 To change the signal range of the charging station

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Installation > Find charging station > Overview of search methods > Charging station range.
3. Use the arrow buttons to select MAX, MID, MIN.
4. Push the BACK button.

**Note:** It is usually better to move the charging station, than to decrease the range of the charging station signal.

### 3.12.6 Corridor width

The boundary wire corridor is the area adjacent to the boundary wire and the guide corridor is the area adjacent to the guide wire. The product uses the corridors to find the charging station. When the product moves in the direction of the charging station, it always moves to the left of the guide wire.

The corridor width is adjusted automatically. Only in rare occasions manual settings need to be entered. The corridor width can be set between 0-9. If guide corridor width is set to 0, the product straddles the guide wire. The factory setting is 6 for the boundary wire and 9 for the guide wire.

### 3.12.6.1 To set the corridor width

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Installation > Advanced > Corridor width.
3. Use the arrow button to select a corridor.
4. Use the number buttons to select a corridor width of 0-9.

**Note:** Make the corridor width as wide as possible for a minimum risk of lines in the lawn.

### 3.12.7 Exit angle

If the sum of the Lawn Coverage function is less than 100%, the product sometimes starts to mow at the charging station. The product moves away from the charging station with an exit angle between 90°–270°. The exit angles can be set to 1–2 exit sectors.

### 3.12.7.1 To set the exit angle

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Installation > Advanced > Exit angles > Sector 1.
3. Use the number buttons to set the angles in degrees.
4. Push the down arrow button.
5. Use the number buttons to select how frequently the product must use each sector. Set in percentage.
6. Push the BACK button.

3.12.8 Reversing distance
The reversing distance makes the product move in reverse for a set distance, before the product starts to cut the lawn. The factory setting is 60 cm / 2 ft.

3.12.8.1 To set the reversing distance
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow button and the OK button to move through the menu structure Installation > Advanced > Reversing distance.
3. Use the number buttons to set the distance.
4. Push the BACK button.

3.12.9 Drive Past Wire function
The front of the product always moves past the boundary wire by a specified distance before the product moves back into the work area. The factory setting is 31 cm / 13 in. You can select a distance of 20-50 cm / 10-15 in.

Note: If the Drive Past Wire distance is changed, the distance will change along the boundary wire everywhere in the work area.

3.12.9.1 To set the Drive Past Wire function
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow button and the OK button to move through the menu structure Installation > Advanced > Drive Past Wire.
3. Use the number buttons to set the distance.
4. Push the BACK button.

3.12.10 Settings

In settings you can change the general settings to your product.

3.12.10.1 Profiles
With the function Profiles, different sets of product settings can be saved. This can be used when one product is used for more than one work areas and charging stations. The product settings and the pairing with the charging stations are saved in the profile and can easily be used again.

To save settings to a profile
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Profiles > Use profiles > Profile A, B, C.
3. Use the arrow buttons and the OK button to select and save the profile.
4. Push the BACK button.

If settings have been changed but not saved, the symbol * is shown beside the profile name.

To change the name of a profile
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Profiles > Use profiles > Profile A, B, C > Rename.
3. Use the arrow buttons and the OK button to select letters.
4. Push the BACK button to save the new profile name.

To use a profile
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Profiles > Use profiles > Profile A, B, C > Select.
3. Push the BACK button.

To connect a new charging station to a profile
1. Save the settings in a profile to be used with the original charging station. Do steps 1–4 in To save settings to a profile on page 33.
2. Put the product in the new charging station.
3. Use the arrow buttons and the OK button to move through the menu structure Security > Advanced > New loop signal.
4. Save a profile for the new charging station, or select a profile in the list. Do steps 1–4 in To save settings to a profile on page 33, or do steps 1–3 in To use a profile on page 33.

3.12.11 ECO mode
If ECO mode is activated, it switches off the signal in the boundary loop, the guide wire and the charging station, when the product is parked or is charging.

Note: Use ECO mode to save energy and avoid interference with other equipment, for example hearing loops or garage doors.

Note: To start the product manually in the work area, push the STOP button before you remove the product from the charging station. If not, the product can not be started in the work area.

3.12.11.1 To set the ECO mode
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > ECO mode.
3. Push the OK button to select the ECO mode.
4. Push the BACK button.

3.12.11.2 Spiral Cutting
The product cuts the grass in a spiral pattern if the grass is longer in an area. Spiral cutting can be set in 5 levels:
- Low-
- Low
- Mid
- High
- High+

The level sets how sensitive the product is to changes in grass height.

Note: Spiral cutting is only started in the Main area mode. Cutting in the Secondary area mode does not let the product to start Spiral cutting. Spiral Cutting does not start in slopes steeper than 15%.

To set the Spiral Cutting

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Spiral Cutting > Use Spiral Cutting.
3. Push the BACK button.

To set the level of Spiral Cutting
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Spiral Cutting > Use Spiral Cutting > Intensity.
3. Use the left arrow button to select the level of the Spiral Cutting.
4. Push the BACK button.

3.12.11.3 Slope control
In order to decrease lawn wear near the boundary wire in slopes, the product prevents to move in the opposite direction when the product operates in a slope. Slope control is enabled in the factory settings.

To set the Slope control
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > Slope control > Use Slope control.
3. Push the BACK button.

3.12.12 General
In General you can change the general settings of the product.

3.12.12.1 To set the time & date
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Time & Date.
3. Use the number buttons to set the time and then push the BACK button.
4. Use the number buttons to set the date and then push the BACK button.
5. Use the arrow buttons to set the time format and then push the BACK button.
6. Use the arrow buttons to set the date format and then push the BACK button.

3.12.12.2 To set the language
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Language.
3. Use the arrow buttons to select language and then push the BACK button.

3.12.12.3 To set the Country & Timezone
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Country & Timezone.
3. Use the arrow buttons to select country and then push the BACK button.

3.12.12.4 To set the unit format
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Unit format.
3. Use the arrow buttons to select unit format and then push the BACK button.

3.12.12.5 To reset all user settings
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Settings > General > Reset all user settings.
3. Use the right arrow button to select Proceed with reset of all user settings?
4. Push the OK button to reset all the user settings.

Note: Security level, PIN code, Loop signal, Messages, Date & Time, Language and Country settings are not reset.

3.12.12.6 The About menu
The About menu displays information about the product, for example serial number and firmware versions.

3.12.13 Accessories
Settings for accessories mounted on the product can be made in this menu.

3.12.13.1 Information
This menu handles accessories mounted on the product. Contact your local Husqvarna representative for more information on available accessories.

3.12.13.2 Automower® Connect app
The app gives two modes of connectivity: Long-range cellular connectivity and Short-range Bluetooth® connectivity. Automower® 420/430X/440/450X support only Bluetooth® communication. If they get Automower® Connect installed as an accessory, they also support cellular communication.

The product can connect to mobile devices that have the Automower® Connect app installed. Automower® Connect is a free app for your mobile device. The Automower® Connect app gives extended functions to your Husqvarna product. You can:
- See the status of your product.
- Change settings to your product.
- Get extended product information.
- Get an alarm if the product moves out of the work area.
- See statistics of your product.

Note: All countries do not support Automower® Connect because of legal reasons and regional specified cellular systems. The included Automower® Connect lifetime service only applies if there is a third part sub-supplier of 2G/3G/4G available in the operational area. In some countries Bluetooth® is not available due to legal reasons.

To install the Automower® Connect app
1. Download the Automower® Connect app on your mobile device.
2. Sign up for a Husqvarna account in the Automower® Connect app.
3. An e-mail is sent to the registered e-mail address. Follow the instructions in the e-mail
in less than 24 hours to validate your account.

4. Log in to your Husqvarna account in the Automower® Connect app.

3.12.13.3 Automower® Connect@Home
Connect@Home uses a short-range Bluetooth® wireless technology. This means that you can communicate between the mobile device and the product while you are in communication range. An icon for Bluetooth® communication will show in the product display when the product is connected with your mobile device.

**Note:** Connect@Home has equivalent but not as extended functions as Automower® Connect, and uses the same app.

**To pair Connect@Home and the product**
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Connect@Home > Pairing > New pairing.
3. Follow the instructions in the app.

**Note:** Automower® Connect is always connected to your product as long as the mobile device have connection with the mobile network, the product is charged and switched on.

**To remove paired accounts**
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Connect@Home > Pairing > Remove paired accounts.
3. Push the OK button to select YES/NO to remove all paired accounts.

3.12.13.4 Automower® Connect
Automower® Connect is included in 430X/450X and is available as an accessory for Automower® 420/440.

**To pair Automower® Connect and the product**
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Automower® Connect > Pairing > New pairing.
3. Follow the instructions in the app.

**To enable the GeoFence function**
GeoFence is a GPS-based theft protection that makes a virtual fence for the product. You will get a message if the product is moved on the other side of the GeoFence.

1. Put the product in the center of the work area.
2. Do steps 1–3 in To get access to the menu on page 26.
3. Use the arrow buttons and the OK button to move through the menu structure Accessories > Automower Connect > GeoFence > Activate GeoFence.
4. Push the OK button.
5. Select Activate GeoFence and push the OK button.

**To set a new center point for the GeoFence function**
1. Put the product in the center of the work area.
2. Do steps 1–3 in To get access to the menu on page 26.
3. Use the arrow buttons and the OK button to move through the menu structure Accessories > Automower Connect > GeoFence > New center point.
4. Push the OK button.

**To set the GeoFence level of sensitivity**
The higher level of GeoFence sensitivity, the easier the alarm starts.

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Automower Connect > GeoFence.
3. Use the arrow buttons to select level of GeoFence sensitivity.
4. Push the BACK button.

**To use the SMS function**
The SMS function sends you an SMS when the product is moved out of the GeoFence.
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Automower Connect > Communication > Use SMS.
3. Push the OK button.
4. Use the arrow buttons and the OK button to move through the menu structure Accessories > Automower Connect > Communication > SMS phone numbers.
5. Push the number buttons to enter the telephone number with country code. For example (+)46701234567.
6. Push the BACK button.

Note: There is a maximum of 10 SMS each month from the product.

Network
APN settings
The product must specify APN settings to be able to use and send data via the mobile net. Settings for Husqvarna SIM is default.

3.12.13.5 Automower® Direct
Automower® Direct uses short-range Bluetooth® communication.

Automower® Direct is useful if the operator has the Automower® Connect app and the PIN code, but has not created a Husqvarna account. Automower® Direct is also useful if the connection with the product is only temporary.

Husqvarna cannot guarantee the time period or coverage of the long-range cellular connectivity. There is therefore a possibility to communicate with the product through Bluetooth® if you are in short-range of the product. You can use Automower® Direct without a Husqvarna account as long as you have the product PIN code.

Note: The Automower® Direct connection is only valid as long as you are within Bluetooth® range. If you move out of Bluetooth® range, you will loose the Automower® Direct connection and you must do the connection process again.

To start to use Automower® Direct
1. Download the Automower® Connect app on your mobile device.
2. Select Automower® Direct on the start screen of the Automower® Connect app.
3. Start Bluetooth® on your mobile device.
4. Set the Main switch on the product to position 0.
5. Set the Main switch on the product to position 1.

Note: The Bluetooth® in the product will be active for pairing for 3 minutes.

6. Select the product to pair with in the Automower® Connect app.
7. Enter the PIN code for the product.

Note: You have access to the menus and functions while you are in Bluetooth® short-range.

3.12.13.6 Ultrasonic Automower® 450X
The Ultrasonic function makes the product decrease speed when the product comes near an obstacle. The product operates at a lower speed if the Ultrasonic function is disabled.

To set the Ultrasonic function
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Ultrasonic > Use.

3.12.13.7 Headlights Automower® 430X/450X
To set the schedule for the headlights
1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Headlights > Schedule.
3. Select between Always ON, Evening only, Evening & night or Always OFF.

Note: Evening only will start the schedule for the headlights at sunset and stop at midnight. Evening & night will start the schedule for the headlights at sunset and stop at sunrise.
To set the Flashes when fault function
The headlights flashes if the product stops to operate because of a fault if Flashes when fault is enabled.

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Headlights > Flashes when fault.
3. Use the OK button to enable or disable the Flashes when fault function.

3.12.13.8 To avoid collisions with the mower house
The wear on the product and the mower house decreases when you select Avoid collisions with mower.

1. Do steps 1–3 in To get access to the menu on page 26.
2. Use the arrow buttons and the OK button to move through the menu structure Accessories > Mower house > Avoid collisions with mower.

**Note:** If Avoid collisions with mower is selected it can result in grass that is not cut around the charging station.
4 Operation

4.1 Main switch

WARNING: Read the safety instructions carefully before you start the product.

WARNING: Keep your hands and feet away from the rotating blades. Do not put your hands or feet near to or below the product when the motor is on.

WARNING: Do not use the product when persons, especially children, or animals are in the work area.

- Set the Main switch in the 1 position to start the product.
- Set the Main switch in the 0 position when the product is not in use or before you do inspection or maintenance on the product.

4.2 To start the product

1. Push the STOP button to open the hatch.
2. Set the Main switch to position 1.
3. Enter the PIN code.
4. Push the START button.
5. Select the desired operating mode and confirm with the OK button. Refer to Operating mode Start on page 39.

6. Close the hatch.

Note: If the product is parked in the charging station, the product only leaves the charging station when the battery is fully charged and if the schedule allows the product to operate.

Note: The first weeks after installation the perceived sound level when cutting the grass may be higher than expected. When the product has cut the grass for some time, the perceived sound level is much lower.

4.3 Operating mode Start

Push the START button to select the following operating modes:
- Main area
- Secondary area
- Override schedule
- Spot cutting

4.3.1 Main area

Main area is the standard operating mode where the product mows and charges automatically.

4.3.2 Secondary area

To mow secondary areas the operating mode Secondary area must be selected. In this mode, the operator must move the product manually between the main area and the secondary area. The product mows for a selected period of time or until the battery is empty. When the battery is empty, the product stops and the message Needs manual charging shows in the product display. Put the product in the charging station to charge the battery. When the battery is charged,
the product moves out of the charging station and stops. The product is now prepared to start operation, but needs confirmation from the operator first. In the Secondary area mode, the product operates for a selected period of time or until the battery is empty.

**Note:** If you want to cut the main area after the battery is charged, set the product to Main area mode before you put the product in the charging station.

4.3.3 Override schedule

The schedule settings can be temporarily overridden by selecting Override schedule. It is possible to override the schedule for 24 h or 3 days. It is not possible to override a standby period.

4.3.4 Spot cutting

The Spot cutting function is activated with the START button and is useful for quickly mowing an area where the grass has been mown less than in other parts of the yard. You must manually move the product to the chosen area.

Spot cutting means that the product mows in a spiral pattern in order to cut the grass in the area where it was started. When this is done, the product automatically switches back to Main area or Secondary area.

4.4 Operating mode Park

Push the PARK button to select the following operating modes:

- Park until further notice
- Start with schedule

4.4.1 Park until further notice

The operation mode Park means that the product goes back to the charging station where it stays until a new operation mode is selected and the START button is pushed.

4.4.2 Start again with next schedule

The product stays in the charging station until the next Schedule setting permits operation. This operating mode is suitable if you want to cancel an ongoing mowing cycle and allow the product to stay in the charging station until the next day.

4.5 To stop the product

1. Push the STOP button on top of the product.

The product stops and the blade motor stops.

4.6 To switch off the product

1. Push the STOP button on top of the product.
2. Set the Main switch to position 0.

4.7 To charge the battery

**WARNING:** Only charge the product using a charging station which is intended for it. Incorrect use may result in electric shock, overheating or leakage of corrosive liquid from the battery.

When the product is new or has been stored for a long period, the battery can be empty and needs to be charged before starting. In the Main area mode, the product automatically alternates between mowing and charging.

1. Set the Main switch to position 1.
2. Place the product in the charging station. Slide the product in as far as possible to ensure proper contact between the product and the charging station. Refer to contact and charging plates in *Product overview on page 4*
3. The display shows a message that charging is in progress.
5 Maintenance

5.1 Introduction - maintenance

**WARNING:** The product must be switched off before any maintenance is done.

**WARNING:** Wear protective gloves.

For better operation and longer service life, make sure to clean the product regularly and replace worn parts. All maintenance and servicing must be done according to Husqvarna’s instructions. Refer to **Warranty on page 64**.

When the product is first used, the blade disc and blades should be inspected once a week. If the amount of wear during this period has been low, the inspection interval can be increased.

It is important that the blade disc rotates easily. The edges of the blades should not be damaged. The lifetime of the blades varies immensely and depends for instance on:

- Operating time and size of the work area.
- Type of grass and seasonal growth.
- Soil, sand and use of fertilizers.
- The presence of objects such as cones, windfalls, toys, tools, stones, roots and the like.

The normal life is 3 to 6 weeks when used under favorable conditions. Refer to **Replace the blades on page 43** on how to replace the blades.

**Note:** Working with blunt blades gives a poorer mowing result. The grass is not cut cleanly and more energy is needed resulting in the product not mowing such a large area.

5.2 Clean the product

**CAUTION:** Never use a high-pressure washer to clean the product. Never use solvents for cleaning.

The product does not operate satisfactorily in slopes if the wheels are blocked with grass. Use a soft brush to clean the product.

Husqvarna recommends to use a special cleaning and maintenance kit, available as accessory. Speak to your Husqvarna representative for more information.

5.2.1 Chassis and blade disc

Inspect the blade disc and blades once a week.

1. Push the STOP button.
2. Set the **Main switch** to position 0.
3. Lift the product onto its side.
4. Clean the blade disc and chassis using for example a dish brush. At the same time, check that the blade disc rotates freely in relation to the foot guard. Also, check that the blades are intact and can pivot freely.

5.2.2 Wheels

Clean around the wheels. Grass on the wheels can impact on how the product performs in slopes.

5.2.3 The body of the product

Use a moist, soft sponge or cloth to clean the body of the product. If the body of the product is dirty, use a mild soap solution to clean it.

5.2.4 Charging station

**WARNING:** Use the plug to disconnect the charging station before any maintenance, or cleaning of charging station or power supply.

Clean the charging station regularly from grass, leaves, twigs and other objects that may impede docking.
5.3 Replace the blades

WARNING: Use blades and screws of the right type. Husqvarna can only guarantee safety when using original blades. Only replacing the blades and reusing the screw can result in a screw wearing during mowing. The blades can then be propelled from under the body and cause serious injury.

Replace worn or damaged parts for safety reasons. Even if the blades are intact, they should be replaced on a regular basis for the best mowing result and low energy usage. All 3 blades and screws must be replaced at the same time to obtain a balanced cutting system. Use Husqvarna original blades embossed with the crowned H-mark logotype, refer to Technical data on page 60.

5.3.1 To replace the blades

1. Push the STOP button
2. Set the Main switch to position 0.
3. Turn the product upside down. Place the product on a soft and clean surface to avoid scratching the body and the hatch.
4. Rotate the skid plate so that its holes align with the screws for the blade.
5. Remove the 3 screws with a screwdriver.
6. Remove the 3 blades.
7. Attach 3 new blades and screws.
8. Make sure that the blades can pivot freely.

5.4 Battery

WARNING: Only charge the product using a charging station which is intended for it. Incorrect use may result in electric shock, overheating or leakage of corrosive liquid from the battery. In the event of leakage of electrolyte flush with water and seek medical help if it comes in contact with the eyes etc.

WARNING: Use only original batteries recommended by the manufacturer. Product safety cannot be guaranteed with other batteries. Do not use non-rechargeable batteries.

CAUTION: The battery must be charged fully before winter storage. If the battery is not fully charged it can be damaged and in certain cases be rendered useless.

If the operating time for the product is shorter than normal between charges, this indicates that the battery is getting old and eventually needs replacing.

Note: Battery life is dependent on the length of the season and how many hours a day the product is operating. A long season or many hours of use a day means that the battery must be replaced more regularly. The battery is fine as long as the product maintains a well-cut lawn.
5.5 Winter service

Take your product to your Husqvarna central service for service prior to winter storage. Regular winter service will maintain the product in good condition and create the best conditions for a new season without any disruptions.

Service usually includes the following:

- Thorough cleaning of the body, the chassis, the blade disc and all other moving parts.
- Testing of the product’s function and components.
- Checking and, if required, replacing wear items such as blades and bearings.
- Testing the product’s battery capacity as well as a recommendation to replace battery if necessary.
- If new firmware is available, the product is updated.
6 Troubleshooting

6.1 Introduction - troubleshooting
In this chapter, faults and symptoms are described and can guide you if the product does not operate as expected. More suggestions for steps to take in the event of malfunction or symptoms can be found on www.husqvarna.com.

6.2 Fault messages
The list below shows a number of fault messages that may be shown in the display of the product. Speak to your local Husqvarna representative if the same message shows frequently.

<tr>
<td>Accumulation of grass by the blade disc or around the motor shaft.</td>
<td></td>
<td>Check that the blade disc rotates freely and easily. If not, screw off the blade disc and remove grass and foreign objects. Refer to <em>Chassis and blade disc</em> on page 42.</td>
</tr>
</tbody>
</table>

**6.6 Find breaks in the loop wire**

Breaks in the loop wire are usually the result of unintentional physical damage to the wire such as when gardening with a shovel. In countries with ground frost, also sharp stones that move in the ground can damage the wire. Breaks can also occur due to the wire being stretched excessively during installation.

Mowing the grass too low right after the installation can damage wire insulation. Damage to the insulation may not cause disruptions until several weeks or months later. To avoid this, always select the maximum cutting height the first weeks after installation and then lower the height one step at a time every second week until the desired cutting height has been reached.

A defective splicing of the loop wire can also lead to disruptions several weeks after the splice was done. A faulty splice can, for example, be the result of the original coupler not being pressed together hard enough with a pair of pliers, or that
a coupler of lower quality than the original coupler has been used. Please first check all known splices before further troubleshooting is done.

A wire break can be located by gradually halving the distance of the loop where the break may have occurred until there is only a very short section of the wire left.

The following method does not work if ECO mode is activated. Make sure first that ECO mode is switched off. Refer to ECO mode on page 34.

1. Check that the indicator lamp in the charging station flashes blue, which indicates a break in the boundary loop. Refer to Indicator lamp in the charging station on page 54.

2. Check that the boundary wire connections to the charging station are properly connected and not damaged. Check that the indicator lamp in the charging station is still flashing blue.

3. Switch the connections between the guide wire and the boundary wire in the charging station.

   Start by switching connection and .

   If the indicator lamp has a solid green light, then the break is somewhere on the boundary wire between and the point where the guide wire is connected to the boundary wire (thick black line in the illustration).

To rectify the fault you will need boundary wire, connector(s) and coupler(s):

a) If the suspected boundary wire is short then it is easiest to exchange all of the boundary wire between and the point where the guide wire is connected to the boundary wire (thick black line).

b) If the suspected boundary wire is long (thick black line) then do as follows: Put and back to their original positions. Then disconnect . Connect a new loop wire to . Connect the other end of this new loop wire at the middle of the suspected wire section.
If the indicator lamp now is green, then the break is somewhere in the wire between the disconnected end to the point where the new wire is connected (thick black line below). In that case, move the connection for the new wire closer to the disconnected end (roughly at the middle of the suspected wire section) and check again if the indicator lamp is green.

Continue until only a very short section of the wire remains which is the difference between a solid green light and a flashing blue light. Then follow instruction in step 5 below.

4. If indicator lamp still flashes blue in step 3 above: Put and back in their original positions. Then switch and . If indicator lamp now is lit with a solid green light then disconnect and connect a new boundary wire to . Connect the other end of this new wire at the middle of the suspected wire section. Follow the same approach as in 3a) and 3b) above.

5. When the break is found, the damaged section must be replaced with a new wire. Always use original couplers.
7 Transportation, storage and disposal

7.1 Transportation
The supplied Li-ion batteries obey the Dangerous Goods Legislation requirements.

- Obey all applicable national regulations.
- Obey the special requirement on package and labels for commercial transportations, including by third parties and forwarding agents.

7.2 Storage

- Fully charge the product. Refer to To charge the battery on page 40.
- Switch off the product. Refer to To switch off the product on page 40.
- Clean the product. Refer to Clean the product on page 42.
- Keep the product in a dry, frost free space.
- Keep the product with all wheels on level ground during storage, or use a wall hanger.
- If you keep the charging station indoors, disconnect and remove the power supply and all the connectors from the charging station. Put the end of each connector wire in a connector protection box.

Note: If you keep the charging station outdoors, do not disconnect the power supply and the connectors.

- Contact Husqvarna sales representative about what accessories are available for your product.

7.3 Disposal

- Obey the local recycling requirements and applicable regulations.
- For questions about how to remove the battery, refer to To remove the battery on page 59.

7.3.1 To remove the battery

CAUTION: Only remove the battery when you dispose the product. When you remove the warranty seal, the Husqvarna warranty is no longer applicable.

1. Switch off the product. Refer to To switch off the product on page 40.
2. Pull out the grommet on the charging cable at the very front of the product, and carefully remove the connector.
3. Lift the cover, one corner at a time.
4. Remove the 14 screws with a Torx 20.

5. Lift the rear edge of the top section of the chassis.
6. Disconnect the cable from the main circuit board.
7. Remove the top section of the chassis.
8. Remove the 4 screws that hold the battery with a Torx 20.
9. Disconnect the battery connection from the main circuit board.
10. Open the battery cover and remove the battery.

---

5 Maximum active output power to antennas in the frequency band in which the radio equipment operates.

6 Noise emissions in the environment measured as sound power ($L_{wa}$) in conformity with EC directive 2000/14/EC and New South Wales legislation (Protection of the Environment Operations Regulation 2017, Noise Control). The guaranteed sound power level includes variation in production as well as variation from the test code with 1-3 dB(A). Noise emission data can be found on the rating label and in the Technical data chapter.

7 Sound pressure noise uncertainties $K_{pa}$, 2-4 dB (A)

Husqvarna AB does not guarantee full compatibility between the product and other types of wireless systems such as remote controls, radio transmitters, hearing loops, underground electric animal fencing or similar.

The products are made in England or the Czech Republic. See information on the rating plate. Refer to Product overview on page 4

### 8.2 Registered trademarks

The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, inc. and any use of such marks by Husqvarna is under license.
9.1 Warranty terms

Husqvarna® warranty covers this product's functionality for a period of 2 years from date of purchase. The warranty covers serious faults relating to materials or manufacturing faults. Within the warranty period, we will replace the product or repair it at no charge if the following terms are met:

- The product and the charging station may only be used in compliance with the instructions in this Operator’s Manual. This manufacturer's warranty does not affect warranty entitlements against the dealer/retailer.
- End-users or non-authorized third parties must not attempt to repair the product.

Examples of faults which are not included in the warranty:

- Damage caused by water seepage from using a high-pressure washer, or from being submerged under water, for example when heavy rain forms pools of water.
- Damage caused by lightning.
- Damage caused by improper battery storage or battery handling.
- Damage caused by using a battery that is not a Husqvarna original battery.
- Damage caused by not using Husqvarna original spare parts and accessories, such as blades and installation material.
- Damage to the loop wire.
- Damage caused by non-authorized changing or tampering with the product or its power supply.

The blades and wheels are seen as disposable and are not covered by the warranty.

If an error occurs with your Husqvarna product, please contact Husqvarna customer service for further instructions. Please have the receipt and the product’s serial number at hand when contacting Husqvarna customer service.
10.1 Supplier's Declaration of Conformity
Issuer: Husqvarna AB, Drottninggatan 2, S-561 82 Huskvarna, Sweden.
www.husqvarnagroup.com
Responsible party: Husqvarna Professional Products, Inc. 9335 Harris Corners Parkway Suite 500 Charlotte, NC 28269 United states U.S.
Contact Information: Michael Campbell, Sr Director Quality, test compliance, Telephone: +1 704 597 5000.

10.2 Compliance requirements
FCC ID: XPY1CGM5NNN (Automower® Connect module 2G).
FCC ID: XPY1CG5NNN (Automower Connect module 2G/3G)
FCC ID: XPYUBX18ZO01 (Automower Connect module 2G/4G)
FCC ID: ZASHQ-BLE-1A and FCC ID ZASHQ-BLE-1B (Bluetooth® module).
The Bluetooth module is located on the HMI-board (PCBA) in the upper chassis. It must only be accessed by an authorized service technician.
The device complies with part 15 of the FCC Rules. Operation is subjected to the following 2 conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

WARNING: To comply with RF exposure requirements, please maintain a separation distance of at least 20 cm/ 7 inches from any part of the product.

Note: Changes or modifications made to this equipment not expressly approved by Husqvarna may void the FCC authorization to operate this equipment.

Note: This device complies with Part 15 of the FCC Rules [and with Industry Canada licence-exempt RSS standard(s)]. Operation is subject to the following two conditions: this device may not cause harmful interference, and this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.
